IMPORTANT NOTICE

General

- This manual has been authored with simplified grammar, to meet the needs of international users.
- The operator of this equipment must read and follow the descriptions in this manual. Wrong operation or maintenance can cancel the warranty or cause injury.
- Do not copy any part of this manual without written permission from FURUNO.
- If this manual is lost or worn, contact your dealer about replacement.
- The contents of this manual and equipment specifications can change without notice.
- The example screens (or illustrations) shown in this manual can be different from the screens you see on your display. The screens you see depend on your system configuration and equipment settings.
- Save this manual for future reference.
- Any modification of the equipment (including software) by persons not authorized by FURUNO will cancel the warranty.
- The following concern acts as our importer in Europe, as defined in DECISION No 768/2008/EC.
 - Name: FURUNO EUROPE B.V.
 - Address: Ridderhaven 19B, 2984 BT Ridderkerk, The Netherlands
- All brand and product names are trademarks, registered trademarks or service marks of their respective holders.

How to discard this product

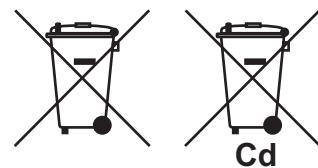

Discard this product according to local regulations for the disposal of industrial waste. For disposal in the USA, see the homepage of the Electronics Industries Alliance (<http://www.eiae.org/>) for the correct method of disposal.

How to discard a used battery

Some FURUNO products have a battery(ies). To see if your product has a battery(ies), see the chapter on Maintenance. Follow the instructions below if a battery(ies) is used.

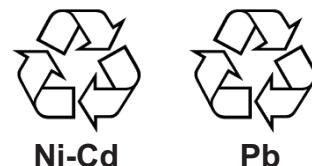

In the European Union

The crossed-out trash can symbol indicates that all types of batteries must not be discarded in standard trash, or at a trash site. Take the used batteries to a battery collection site according to your national legislation and the Batteries Directive 2006/66/EU.

In the USA

The Mobius loop symbol (three chasing arrows) indicates that Ni-Cd and lead-acid rechargeable batteries must be recycled. Take the used batteries to a battery collection site according to local laws.

In the other countries

There are no international standards for the battery recycle symbol. The number of symbols can increase when the other countries make their own recycling symbols in the future.

⚠ SAFETY INSTRUCTIONS

Read these safety instructions before you operate the equipment.

WARNING

Indicates a condition that can cause death or serious injury if not avoided.

CAUTION

Indicates a condition that can cause minor or moderate injury if not avoided.

Warning, Caution

Prohibitive Action

Mandatory Action

Safety information for the Operator

WARNING

ELECTRICAL SHOCK HAZARD
Do not open the equipment.

Only qualified personnel
should work inside the
equipment.

Do not disassemble or modify the equipment.

Fire, electrical shock or serious injury can result.

Immediately turn off the power at the switchboard if the equipment is emitting smoke or fire.

Continued use of the equipment can cause fire or electrical shock. Contact a FURUNO agent for service.

Keep heater away from equipment.

A heater can melt the equipment's power cord, which can cause fire or electrical shock.

Use the proper fuse.

Fuse rating is shown on the equipment.
Use of a wrong fuse can result in damage to the equipment.

CAUTION

A warning label is attached to the equipment. Do not remove the label. If the label is missing or damaged, contact a FURUNO agent or dealer about replacement.

To avoid electrical shock, do not remove cover. No user-serviceable parts inside.

Name: Warning Label (1)

Type: 86-003-1011-1

Code No.: 100-236-231

Safety information for the Installer

WARNING

Do not open the equipment unless totally familiar with electrical circuits and service manual.

ELECTRICAL SHOCK HAZARD

Only qualified personnel should work inside the equipment.

Turn off the power at the mains switch-board before beginning the installation.

Fire, electrical shock or serious injury can result if the power is left on or is applied while the equipment is being installed.

CAUTION

Observe the following compass safe distances to prevent deviation of a magnetic compass.

		Standard	Steering
Display unit	NX-700A	1.45 m	0.95 m
	NX-700B	0.30 m	0.30 m
Receiver unit NX-7001		1.15 m	0.75 m

Attach securely protective earth to the ship's body.

The protective earth is required to the power supply to prevent electrical shock.

FOREWORD

Congratulations on your choice of the FURUNO NX-700A/B NAVTEX Receiver. We are confident that you will enjoy many years of operation with this fine piece of equipment.

Since 1948, Furuno Electric Company has enjoyed an enviable reputation for quality and reliability throughout the world. Our extensive global network of agents and dealers furthers this dedication to excellence.

The NX-700A/B is just one of the many Furuno developments in the field of marine radio communication.

NX-700A: Display unit w/printer

NX-700B: Display unit w/o printer

This NX-700A/B provides cost-effective price, high sensitivity and simple operation in one compact and light-weight unit. In addition to its fundamental function of receiving NAVTEX broadcasts, this unit can also function as nav data display when connected to navigation equipment.

This unit is designed and constructed to ensure the user many years of trouble-free operation. To obtain full performance from the equipment, however, you should carefully read and follow the recommended procedures for installation, operation and maintenance. No machine can perform its intended functions unless it is installed and maintained properly.

Thank you for considering and purchasing FURUNO equipment.

Features

NAVTEX (Navigational Telex) is a world wide coastal telex broadcasting system. Coastal NAVTEX broadcasting stations with specific ID's transmit Navigational warnings. Meteorological warnings, Search and Rescue (SAR) information and other navigational information for NAVTEX receiver-equipped vessels sailing in coastal waters.

The FURUNO NX-700 NAVTEX receiver receives NAVTEX messages and automatically displays them together with station ID and message category information.

If ship's position data is fed from navigation equipment, the NX-700 automatically decides in which NAVAREA the vessel is navigating, and selects stations. (NAVAREAs are geographical zones defined by the international Maritime Organization.)

-Meets the following standards and regulations

MSC.148 (77)

MSC.302 (87)

IMO A.694 (17)

IEC61097-6 Ed. 2 (2005-12)

IEC 60945 Ed. 3 and 4

IEC 61162-1 Ed.4 (2010-11)

IEC 61162-2

EN 300 065 V 1.1.3

EN 301 011 V 1.1.1 (1998-09)

ITU-R M.540-2

ITU-R M.625-3

-Receives 518 kHz and another (490 or 4209.5 kHz) at the same time

-5" LCD display

-Prints out the message selected

-Bright 76 x 100 mm, monochrome LCD, 240 x 320 dots with adjustable contrast and brilliance

-Low power consumption

-Displays the NAV data (date, own ship's position, speed and course) or distance (distance between own ship's position and information mentioned in the message) at the bottom of screen

With regards to CE declarations, please refer to our website (www.furuno.com), for further information about RoHS conformity declarations.

Antenna unit	To be installed in an exposed area
Display unit Receiver unit	To be installed in a protected area

1. PRINCIPLE OF NAVTEX SYSTEM

1.1 How NAVTEX Works

NAVTEX is an acronym meaning Navigational Telex, and as its name shows, it is a kind of narrow band radio teletype system for sending (by frequency shift keying) text messages expressed in a 7-unit code. The difference is that a NAVTEX transmitter transmits nine control characters (header code) ahead of the main message, so that the receiver can identify the station, message type and serial number automatically.

1.2 NAVTEX System Operation

For navigation purposes, the world is divided into 21 areas (called Navareas). Each Navtex station has an identification code, from "A" to "Z". The frequency assigned to Navtex are 518 kHz and another (490 or 4209.5 kHz), and many stations exist in the same service coverage.

If the stations were to transmit without any rule, the system would collapse due to mutual interference. To avoid this problem, the following rules apply.

- The transmission schedule is determined so that two or more stations having a common service area may not overlap in time.
- Each station transmits with minimum required power to cover its service area (200 to 400 nautical miles nominal).

1.3 Message Format

For automatic identification of messages, each message starts with nine control characters, called "Header codes".

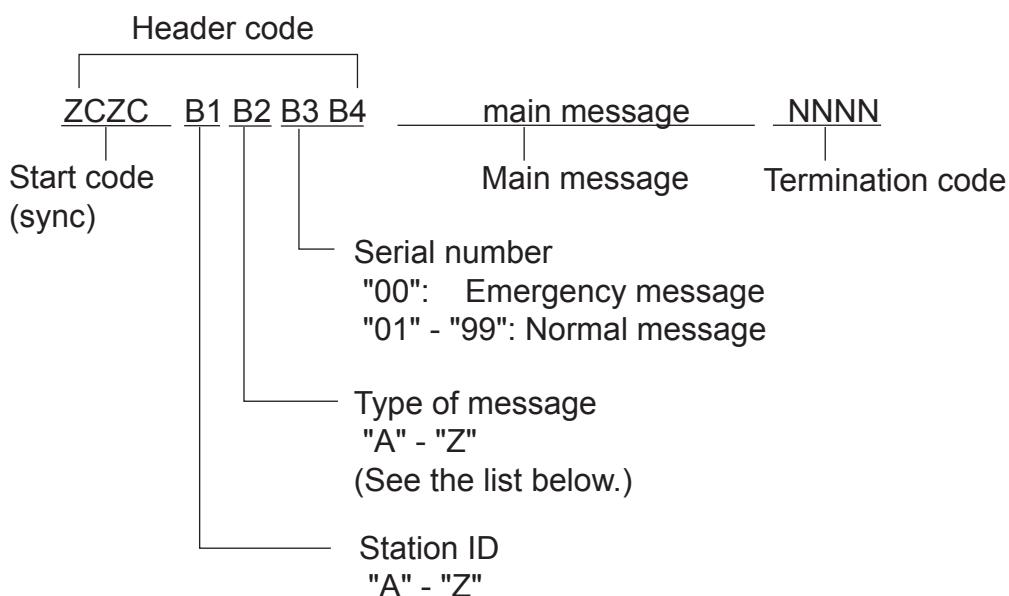

The first five characters are always "ZCZC_" and common to all messages. This part is used for message synchronization. The latter four characters are designed as B1, B2, B3 and B4 indicate origin, category and serial number of the message.

Character B1 is the identification letter of the Navtex station "A" thru "Z".

Character B2 indicates the type of message. "A" thru "Z", as listed below.

Character B3 and B4 indicate the serial number of the message. The serial numbers are counted up from "01" to "99", and starts from "01" again. Number "00" is specially reserved for important emergency messages.

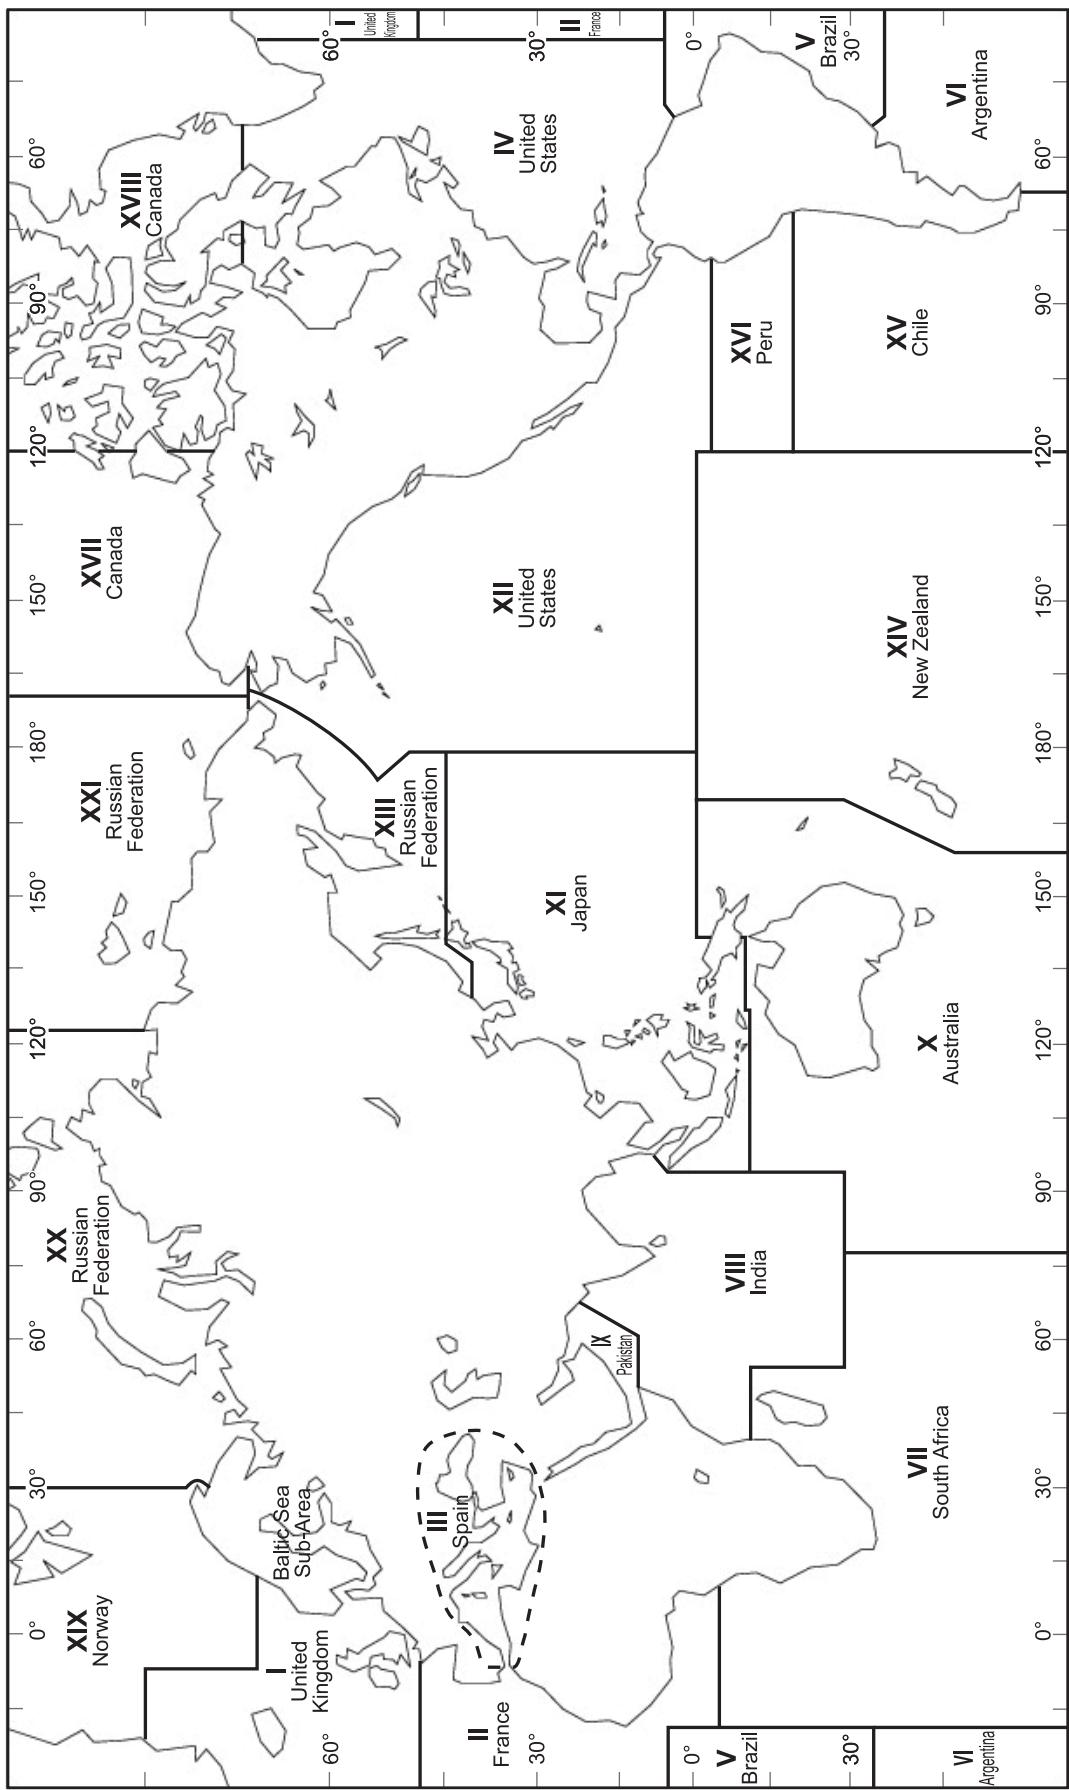

The end of each message is indicated by "NNNN" (four successive N's). General message format is summarized below.

[Type of message (category)]

A:	navigational warning	I:	reserved presently not used
B:	meteorological warning	J:	SATNAV message
C:	ice report	K:	other electronic navigational aid system message
D:	search and rescue information/piracy and armed robbery	L:	navigational warning (additional)
E:	meteorological forecast	M to Y:	reserved presently not used
F:	pilot message		
G:	AIS		
H:	LORAN-C message	Z:	QRU (no message on hand)

*: This equipment can not set the NAV area numbers from XVIII to XXI. These are registered as the NAV area numbers in the parentheses in the above list (i.e. EXT, I or XIII).

2. OPERATION

2.1 Operating Controls

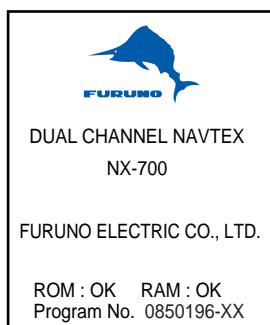

Display unit, front view

2.2 Turning the Unit On/Off

Press the ⎢ key to turn the unit on. A beep sounds and the equipment shows the start up display, where the ROM and RAM are checked for proper operation and the program no. is displayed. The results of the check are shown as OK or NG (No Good).

When the results are OK, the list display is shown after five seconds after completion of the check, with frequency last used before turning the power off.

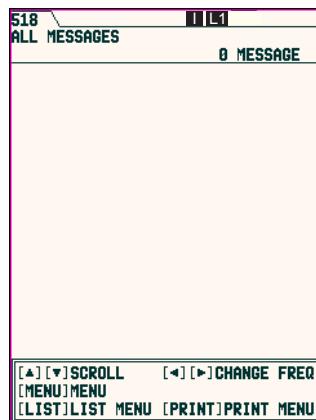

2. OPERATION

At the default setting, the equipment functions as below;

When the results of the check are OK, ALL MESSAGE display for 518 kHz appears. This screen shows all messages received in 518 kHz.

You can switch 518 kHz (International message) and 490 kHz (local message) to display. The NX-700A is preset to print all received message out.

All message display (518 kHz)

Note 1: To display all received messages in 490 kHz, press **◀** or **▶**.

Note 2: To cancel the printing all received messages out, see page 2-11.

To turn the power off, press the  key again.

Note: If NG appears for any test, try to press any key to go to the next stage.

The equipment, however, may not be operated properly. Contact your dealer if the problem persists.

2.3 Adjusting LCD Dimmer

You can adjust LCD and panel dimmer with the **+ DIM –** key. The adjustment range is 0 (dark) to 9 (bright).

+: Raises the dimmer.

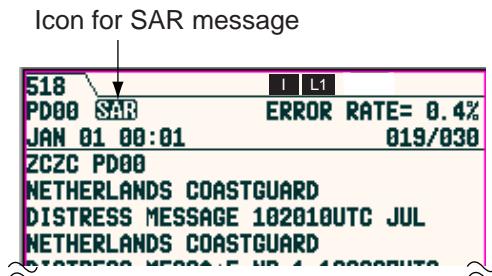

-: Decreases the dimmer.

2.4 Confirming the New Message

When you receive a new message, do one of the following depending on message received.

SAR (Search and Rescue) message

1. When an SAR message is received, the audible alert sounds and details for the SAR message appear.

2. Press any key other than \odot key to silence the alarm.

Other messages

1. When a message other than an SAR message is received, the display shows one of the following windows.

Received new int'l msg.
Display new msg ? Yes <input type="button" value="No"/>

International message

Received new local msg.
Display new msg ? Yes <input type="button" value="No"/>

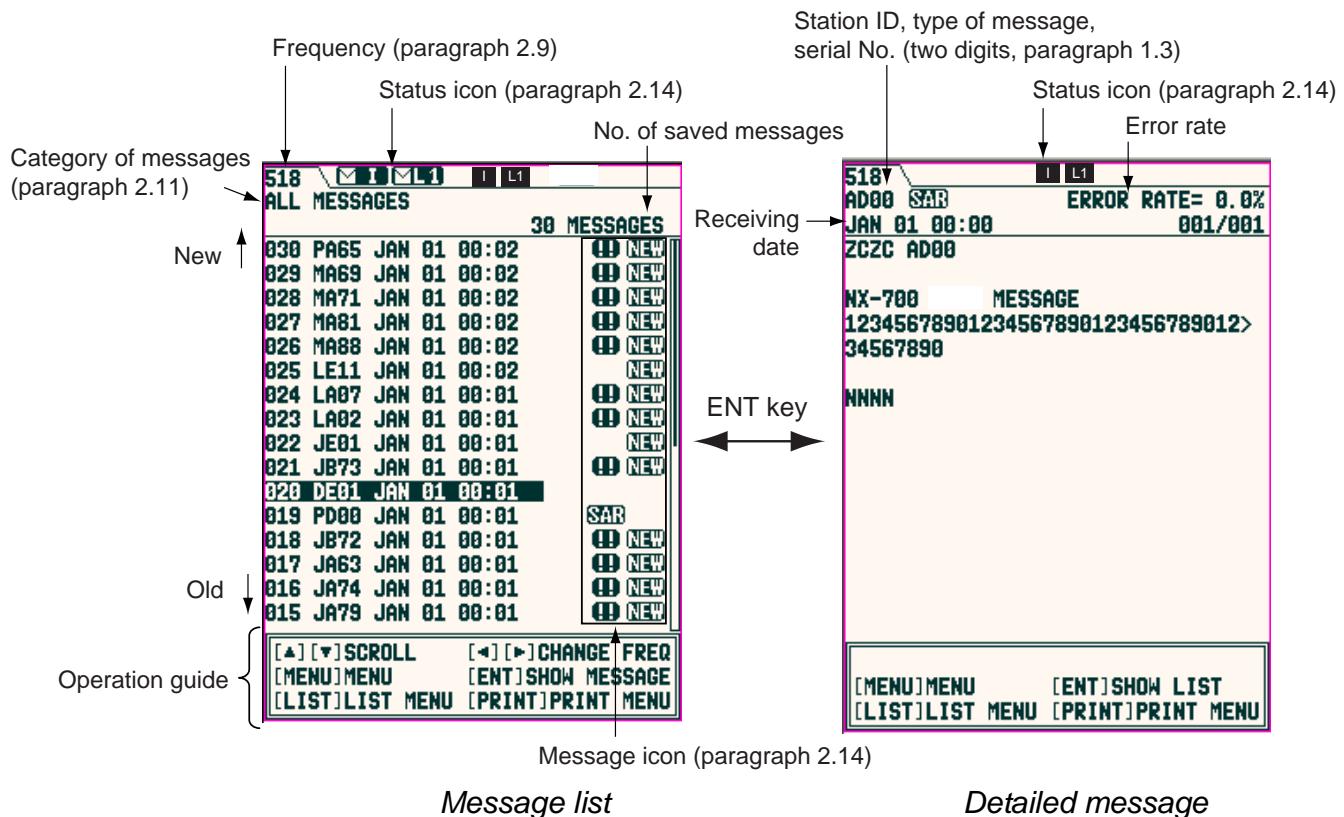

Local message

2. If you want to read the message immediately, press \blacktriangleleft to choose “Yes” and then press the **ENT** key to display the message

To read the message later, choose “No”, and then press the **ENT** key to close the window.

2.5 Sample Messages

Press **▲** or **▼** on the cursor pad to choose a message, and then press the **ENT** key to show the detailed information for that message. The message list and detailed message displays can be switched by pressing the **ENT** key.

Note 1: The operation guide at the bottom of screen shows the functions of the keys available for use with the current screen.

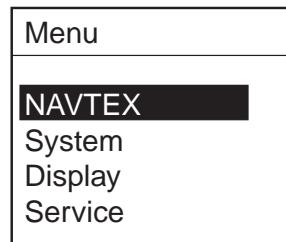

Note 2: The character size can be changed. For detail, see page 2-18.

Key	Display mode	Function
▲▼	List	Scrolls the list.
	Detailed	Scrolls the message.
◀▶	List	Switches the international and local lists.
	Detailed	Shows the newer (◀) or older (▶) message.
MENU	List	Shows the main menu.
	Detailed	
ENT	List	Shows the detailed message selected.
	Detailed	Shows the message list.
LIST	List	Shows the list options.
	Detailed	
PRINT	List	Shows the print options.
	Detailed	

2.6 Choosing the Receive Mode

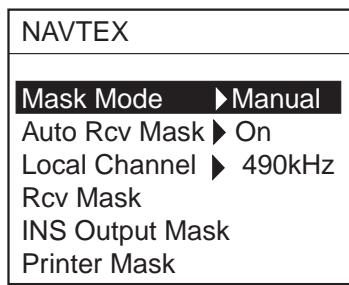

The NAVTEX menu allows you to select what station to receive, automatically, manually. The Auto mode requires navigation data, and stations are automatically selected according to the distance between own ship and NAVTEX stations. If navigation data is not input, all stations are selected. The manual mode lets you freely stations to receive. The INS mode allows you to set the station, message and local channel from the external equipment (ex. Integrated Navigation System, using NRM or PFEC sentence) connected. Note that Manual should be chosen if you intend to not use the command from the external equipment.

1. Press the **MENU/ESC** key to show the main menu.

Main menu

2. Press **▲** or **▼** to choose NAVTEX.
3. Press the **ENT** key or **▶** to open the NAVTEX menu.

NAVTEX menu

4. Press **▲** or **▼** to choose Mask Mode, and then press the **ENT** key or **▶** to show the mask mode options.

Mask mode options

5. Press **▲** or **▼** to choose INS (for INS mode) or Manual (for Auto or Manual mode) as appropriate, and then press the **ENT** key.
When choosing INS, Auto Rcv Mask and Local Channel are disappeared from the NAVTEX menu.
6. For Auto and Manual modes, do the follows.
 - a) Choose Auto Rcv Mask, and then press the **ENT** key.
 - b) Press **▼** to choose "On" for Auto or "Off" for Manual, and then press **ENT** key.
7. Press the **MENU/ESC** key several times to close the menu.

2.7 Choosing the Local Frequency

You can choose 490 kHz or 4209.5 kHz as the local frequency on Auto or Manual mode.

1. Press the **MENU/ESC** key to show the main menu.
2. Press **▲** or **▼** to choose NAVTEX, and then press the **ENT** key or **▶**.
3. Press **▲** or **▼** to choose Local Channel, and then press the **ENT** key or **▶** to show the local channel options.

Local channel options

4. Press **▲** or **▼** to choose the frequency 490 kHz or 4209.5 kHz, and then press the **ENT** key.
5. Press the **MENU/ESC** key several times to close the menu.

2.8 Editing the Settings for Station and Message

Stations and messages for receiving/displaying on each station (message) can be edited as below.

(NAVTEX menu)

Rcv Mask

Station

You can receive messages by station in Manual mode.

Message

You can choose the messages to receive in Manual or Auto mode. Note that A/B/D/L cannot be rejected.

INS Output Mask

You can choose the stations and messages to output to the external equipment. Note that A/B/D/L cannot be rejected.

Printer mask

Choose the type of message to be print automatically when it is received. Note that A/B/D/L cannot be rejected.

(Display Menu)

User Select Station & Msg

You can choose the type of stations and messages to display on SELECT MESSAGES display (shown by choosing “User Selected Message” after pressing **LIST** key.) For detail, see page 2-9.

1. Press the **MENU/ESC** key to show the main menu.
2. Press **▲** or **▼** to choose NAVTEX (for Rcv Mask, INS Output Mask and Printer mask) or Display (for User Select Station & Msg), and then press the **ENT** key.
3. Press **▲** or **▼** to choose “Rcv Mask”, “INS Output Mask”, “Printer Mask” or “User Select Station & Msg”.
4. Press the **ENT** key to open the appropriate editing window. (Below is the Rcv Mask editing window.)

Receive mode

Rcv Mask	[Auto]
International frequency → [518]	
Station → ABCDEFGHIJKLMNOPQRSTUVWXYZ	
Message → ABCDEF - H - JKL ----- V --- Z	
Local frequency* → [490]	
Station → ABCDEFGHIJKLMNOPQRSTUVWXYZ	
Message → ABCDEF - H - JKL ----- V --- Z	
[▲][▼] MOVE [ENT] EDIT [MENU] RETURN TO MENU	

*: Local channel selected at Paragraph 2.7.

Edit window (ex. Rcv Mask)

5. Press **▲** or **▼** to choose the item to edit, and then press the **ENT** key to show the alphabet selection window.

Cursor

6. Press **◀** or **▶** to choose the alphabet desired, and then press **▲** or **▼** to choose to receive or not.
The alphabet you have chosen not to receive is marked with “-” (hyphen).
7. Press the **ENT** key.
8. Repeat steps 5 through 7 to complete.
9. Press the **MENU/ESC** key to close the window.

2.9 Switching the Frequency to Display

With showing the message list, you can switch the frequency to 518 kHz or 490 (or 4209.5) kHz by pressing **◀** or **▶** key.

Switching the frequency to display

2.10 Alarm Messages

The sequence of events when an alarm message is received is as shown below.

When receiving SAR (Search and Rescue) message:

The audible alarm beep sounds, and the SAR message is shown. Note that All Messages list appears if other list option is chosen when the **ENT** key is pressed. (See paragraph 2.11.) The aural alarm sounds medium beep.

When receiving WARNING message (A/B/L):

When the Warn Msg Alm on System menu is set to On, the audible alarm sounds and the message for receiving appears. The aural alarm sounds long beep.

Note: When both alarms are received, the aural alarm sounds short beeps.

Silencing audible alarm

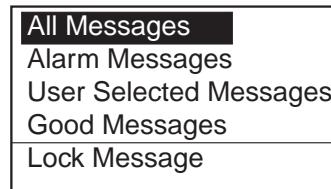

Press any key (except **>Main Menu** key).

2.11 Processing Messages

Choosing messages to display

You can choose which category of messages to display: All, Alarm, User Selected and Good messages.

1. With the message list or detailed message shown, press the **LIST** key to show the list options.

List options

2. Press **▲** or **▼** to choose the item.

All Messages: Shows all messages received.

Alarm Messages: Shows only SAR/WARNING messages.

User Selected Messages: Shows messages arranged at User Select Station & Msg on Display menu.

Good Messages: Shows messages whose error rate is less than 4%.

3. Press the **ENT** key to close the window.

The list chosen at step 2 appears.

Note: When the following messages appear, set the List window to All Messages to show.

Urgent message:

"Message not chosen for display received; it is a int'l (or local) 00 message. Choose "All Message" (LIST menu) to display."

Normal message:

Int'l (or local) message not chosen for display received. Choose "All Message" (LIST menu) to display."

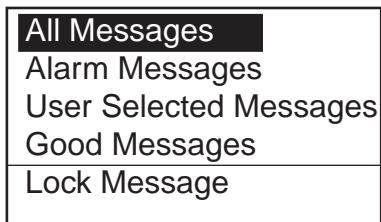

Protecting message from deleting

Messages are automatically deleted from the memory under the following conditions.

- 66 hours passed from the moment when received.
- Older than No. 200

To prevent a message from being deleted, do the follows;

1. Choose the message at the list display.
2. Press the **LIST** key to show the list options.

List options

3. Choose Lock Message from the list window and then press the **ENT** key.
The protect icon (F) appears next to the message selected.

Note 1: To unlock a message, choose it and then select Unlock Message in the list window. (The protect icon disappears.)

Note 2: When you unlock a message which was received 66 hours ago or a message that is older than No. 200, it will be deleted promptly when unlocked.

Note 3: Maximum each 50 messages for International and local (or 25% of each memory) can be protected.

2.12 Printing Messages

Received messages can be printed automatically or manually, from the built-in printer (NX-700A) or external printer (NX-700B).

Printing all messages displayed

All messages chosen on paragraph 2.11 can be printed out.

1. Press the **PRINT** key with showing all messages.

Print options

2. Press **▲** or **▼** to choose “Print”.
3. Press the **ENT** key to print.

Note: When a message is received while printing some messages, the new one cannot be printed.

Printing each message

1. Press **▲** or **▼** to choose the desired message from the list.
2. Press the **ENT** key to show the detailed information.
3. Press the **PRINT** key.
4. Press **▲** or **▼** to choose “Print” from the window.
5. Press the **ENT** key to print.

Canceling printing

When a menu is displayed, you cannot cancel the printing.

1. Press the **PRINT** key while showing the messages to open the print window.
2. Press **▼** to choose “Cancel Print” and then press the **ENT** key.

2.13 Editing the NAVTEX Station List

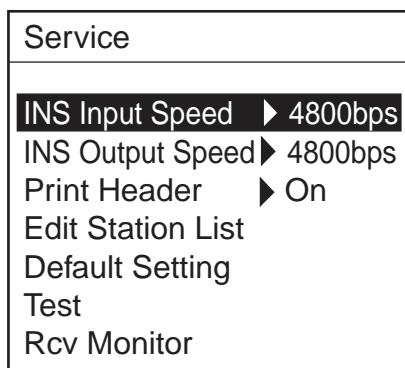

Maximum 300 NAVTEX stations can be registered into the memory.

Note: To cancel editing of a NAVTEX station, press the **MENU/ESC** key. The message “Exit without saving?” appears. Choose “Yes”, and then press **ENT** key.

Adding NAVTEX station

You may add a NAVTEX station to the NAVTEX station list as follows:

1. Press the **MENU/ESC** key to show the main menu.
2. Press **▲** or **▼** to choose Service, and then press the **ENT** key.

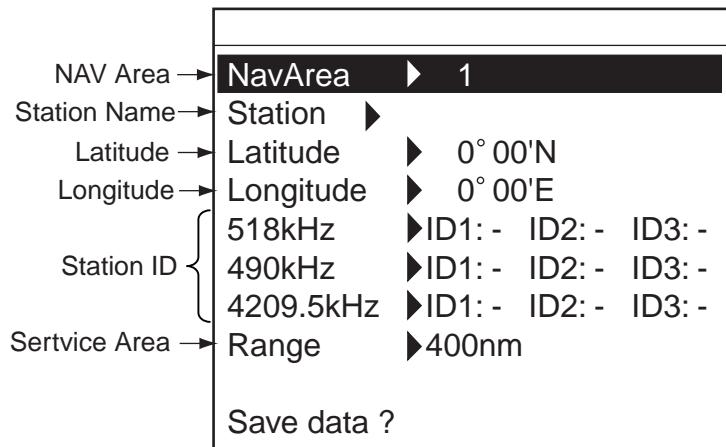

Service menu

3. Press **▲** or **▼** to choose Edit Station List, and then press the **ENT** key.

	[◀][▶] CHANGE NAVAREA [LIST] CHANGE FREQ [ENT] EDIT [MENU] RETURN TO MENU																								

Edit station list display

4. Confirm that New is chosen, and then press the **ENT** key to show the addition window appears.

*New addition window*

5. Confirm that NavArea is chosen, and then press the **ENT** key to show the area No. window.
6. Press ▲ or ▼ to choose a Nav area No. (1 to 16, and EXT), and then press the **ENT** key.
For NAV area No., see paragraph 1.4. EXT is reserved for future use.
7. Confirm that Station is chosen, and then press **ENT** key.
8. Enter a station name (Max. 18 characters), and then press the **ENT** key.
 - a) Press ▲ or ▼ to choose a character. Each press of ▲ shows A -> ... -> Z -> a -> ... -> z -> 0 -> ... -> 9 -> _ -> - -> space in that sequence.
 - b) Press ► to move the cursor to next digit.
 - c) Repeat steps a) and b) to complete the station name.
9. Confirm that Latitude is chosen, and then press the **ENT** key.
10. Enter the latitude for station, and then press the **ENT** key.
Use ▲ or ▼ to switch to North and South.
11. Confirm that Longitude is chosen, and then press the **ENT** key.
12. Enter the longitude for station, and then pres the **ENT** key.
Use ▲ or ▼ to switch to East and West.
13. Choose 518kHz, 490kHz or 4209.5kHz, and then press the **ENT** key.
14. Enter the station ID (A to Z), and then press the **ENT** key.
For multiple stations, fill in ID2 and ID3.
15. Confirm that Range is chosen, and then press the **ENT** key.
16. Enter the service area (1 to 999 nm), and then press the **ENT** key.
17. Confirm that Save data? is chosen, and then press the **ENT** key.
The message "Save new station?" appears.
18. Press ◀ to choose "Yes", and then press **ENT** key to close the new addition window disappears.

Note: If the station ID was not entered at step 14, the message "Enter ID data." appears. Press any key, and then enter the station ID.

19. To enter another NAVTEX station, repeat steps 4 through 18.
20. Press the **MENU/ESC** key several times to close the menu.

Editing NAVTEX station

Existing NAVTEX station may be edited as follows:

1. Press the **MENU/ESC** key to show the main menu.
2. Press **▲** or **▼** to choose Service, and then press the **ENT** key.
3. Press **▲** or **▼** to choose Edit Station List, and then press the **ENT** key.
4. Press **◀** or **▶** to choose the NAV area to be changed (01 to 16, EXT).
5. Press the **LIST** key to choose the frequency to be changed (518kHz, 490kHz or 4209.5kHz).
6. Press **▲** or **▼** to choose the station, and then press the **ENT** key.

7. Press **▲** to choose “Edit”, and then press **ENT** key to show the edit window appears.

11. Press the **MENU/ESC** key several times to close the menu.

Deleting NAVTEX stations

You may delete unnecessary NAVTEX stations as follows:

1. Press the **MENU/ESC** key to show the main menu.
2. Press **▲** or **▼** to choose Service, and then press the **ENT** key.
3. Press **▲** or **▼** to choose Edit Station List, and then press the **ENT** key.
4. Press **◀** or **▶** to choose the NAV area to be deleted. (01 to 16, EXT).
5. Press the **LIST** key to choose the frequency to be deleted (518kHz, 490kHz or 4209.5kHz).
6. Press **▲** or **▼** to choose the station name to be deleted, and then press **ENT** key.

The item window appears.

7. Press ▲ or ▼ to choose Delete, and then press the ENT key.
The message "Delete station?" appears.
8. Press ◀ to choose "Yes", and then press the ENT key to close the edit window.
9. Press the MENU/ESC key several times to close the menu.

2.14 Icons

The NX-700 shows various icons to denote equipment status, and these are as shown in the table below.

Icon	Status	Meaning
Status icon (shown at the tip of display)		
	Blinking	Shows that an International frequency (518 kHz) message has not been read.
	Blinking	Shows that a Local frequency message has not been read. L1: 490 kHz, L2: 4209.5 kHz
	Blinking	L1: 490 kHz, L2: 4209.5 kHz
	Blinking	While receiving a message. I: International frequency (518 kHz) L1: 490 kHz L2: 4209.5 kHz
	Lighting	Appears when the equipment is ready to receive the International frequency.
	Lighting	Appears when the equipment is ready to receive the local frequency (L1: 490 kHz, L2: 4209.5 kHz)
	Lighting	Displayed when the voltage of the internal battery is low. The message "Battery error" also appears on the display.
	Lighting	Print error (no paper, not connected to the printer, etc.). The message "Printer error" also appears on the display.
	Lighting	While printing.
Message icon (shown next to messages)		
	Lighting	Displayed when message is displayed for the first time. (This icon disappeared after showing the detail or 24 hours has passed.)
	Lighting	Displayed when message type D (SAR) is displayed.
	Lighting	Appears when message type A, B or L (Warning) is displayed.
	Lighting	Protected message

2.15 Messages List

In addition to the message “Received new local (int'l) msg.” the following message-related messages may appear on the display.

Message	Meaning	Remedy
New message received. Oldest message deleted to free up memory.	Appears when the oldest message is deleted to make space for the latest one.	Press any key.
Same message with lower error rate received. Currently displayed message will be deleted.	Appears when two messages have the same ID are received and the latter's error rate is lower than the former.	Press any key.
Term of validity expired. Currently displayed message will be deleted.	Appears when 66 hours has passed after receiving the currently displayed message.	Press any key.
Message not chosen for display received; it is a int'l 00 message. Choose “All Message”(LIST menu) to display.	Appears when receiving an international message not specified for display (00) at the SELECT MESSAGES display.	Press any key, and then choose All Message in the List window.
Message not chosen for display received; it is a local 00 message. Choose “All Message”(LIST menu) to display.	Appears when receiving a local message not specified for display (00) at the SELECT MESSAGES display.	
Int'l message not chosen for display received. Choose “All Message”(LIST menu) to display.	Appears when receiving an international message not specified for display (Normal) at the SELECT MESSAGES display.	
Local message not chosen for display received. Choose “All Message”(LIST menu) to display.	Appears when receiving a local message not specified for display (Normal) at the SELECT MESSAGES display.	

2.16 Other Functions

This paragraph describes the various options which allow you to set up your unit to suit your needs.

NAVTEX menu

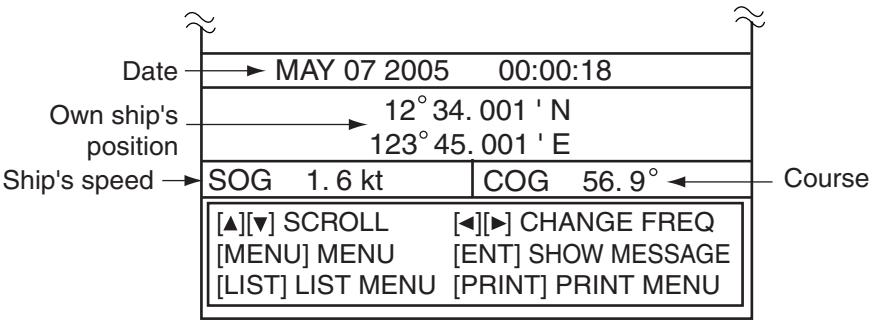

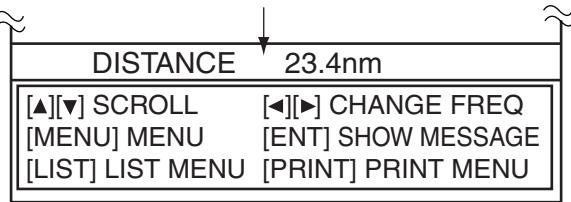

Item	Description	Setting
Mask Mode	Chooses the receiving mode. (See paragraph 2.6.)	INS, Manual
Auto Rcv Mask*	Turns Auto mode on/off.	Off, On
Local Channel*	Chooses the local channel.	490kHz, 4209.5kHz
Rcv Mask*	Receives messages in the category.	-
INS Output Mask*	Sets the station and type of message to output to the INS.	-
Printer Mask*	Chooses the station and message to print out automatically (See paragraph 2.8.)	

*: Not available on INS mode.

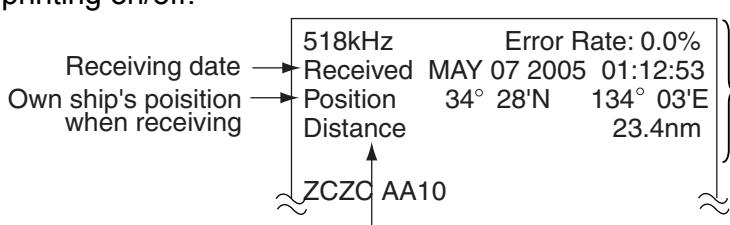

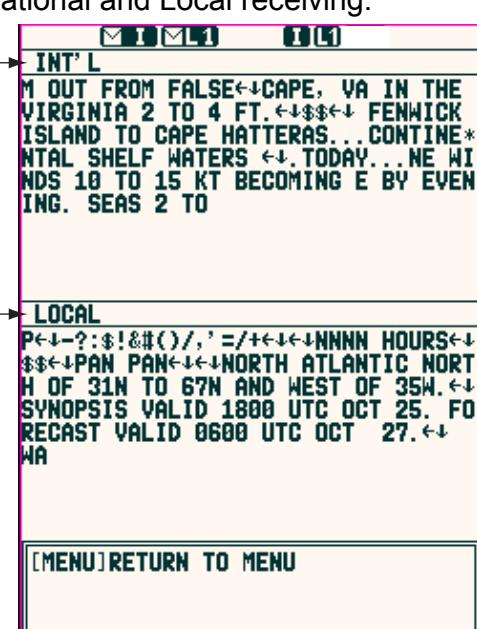

System menu

Item	Description	Setting
Warn Msg Alm	Turns the audible alarm on/off when receiving a Warning message (A, B, and L).	Off, On
Signal Monitor	Turns the audible alarm for monitoring of Rx signal on/off. Off: Disables monitoring. Int'l: Monitors international frequency. Local: Monitors local frequency.	Off, Int'l, Local
Key Beep	Turns key beep on/off.	Off, On
Time Offset	If a GPS receiver feeds nav data to the NAVTEX, you may use local time instead of UTC time. Enter the time difference between local time and UTC time.	-13:30 to +13:30
Units	Chooses units of measurement (distance and ship speed) to be shown on the User Display.	nm, kt, km, km/h, mi, mi/h
Printer	Sets the printer type. (See paragraph 4.6.)	None, NX-700A, Upright, Inverted

Display menu

Item	Description	Setting
Scrolling	Selects the speed of scrolling by pressing ▲ or ▼. Slow: Scrolls by one line. Fast: Scrolls by half of screen. Skips to \$\$: Scrolls line by line in list display; Skips to \$\$ position in detailed display.	Slow, Fast, Skip to \$\$
Font Size	Selects the size of characters.	Small, Medium, Large
Time Display	Selects the time format.	24 hour, 12 hour
Date Display	Selects the date format.	MMM DD YYYY, DD MMM YYYY, YYYY MMM DD
User Display	<p>Selects the type of data as user display to be shown at the bottom of the display.</p> <p>Nav Data</p>  <p>Distance</p> 	Off, Nav Data, Distance
Speed Display	Selects the speed format to be displayed. SOG: Speed Over Ground STW: Speed Through Water	SOG, STW
Contrast	Sets the display contrast.	0 to 9
User Select Station & Msg	Choose the type of messages and stations to display on SELECT MESSAGES display (shown by choosing "User Selected Message" after pressing LIST key.) For detail, see section 2.8.	-

Service menu

Item	Description	Setting
INS Input Speed	Selects the data transmission speed at which to input data from INS.	4800, 9600, 19200, 38400 bps
INS Output Speed	Selects the data transmission speed to output data to the INS.	4800, 9600, 19200, 38400 bps
Print Header	Turns the header (Own ship's position, date, frequency, error rate and distance information when receiving a message) for printing on/off.  Distance between the positions shown in the messasge and own ship's when receiving.	Off, On
Edit Station List	Edits/deletes stations. (See paragraph 2.13.)	-
Default Settings	Restores all default settings. (See paragraph 3.5.)	-
Test	Starts the diagnostic test. (See paragraph 3.4.)	-
Rcv Monitor	Shows the status for International and Local receiving. 	-

2. OPERATION

This page is intentionally left blank.

3. MAINTENANCE & TROUBLESHOOTING

This chapter provides information necessary for keeping your unit in good working order and remedying simple problems.

WARNING	NOTICE
 Do not open the equipment. Hazardous voltage which can cause electrical shock exists inside the equipment. Only qualified personnel should work inside the equipment.	Do not apply paint, anti-corrosive sealant or contact spray to coating or plastic parts of the equipment. Those items contain organic solvents that can damage coating and plastic parts, especially plastic connectors.

3.1 Maintenance

Regular maintenance is important for optimum performance. A maintenance program should be established and should at least include the items shown in the table below.

Maintenance program

Item	Check point	Remedy
Display unit connectors	Check for tight connection.	Tighten loosened connectors.
LCD	The LCD will, in time, accumulate a coating of dust which tends to dim the picture. Wipe LCD lightly with soft cloth to remove dust.	Wipe the LCD carefully to prevent scratching, using tissue paper and an LCD cleaner. To remove dirt or salt deposits, use an LCD cleaner, wiping slowly with tissue paper so as to dissolve the dirt or salt. Change paper frequently so the salt or dirt will not scratch the LCD. Do not use solvents such as thinner, acetone or benzene for cleaning.
Ground terminal	Check for tight connection and corrosion.	Clean or replace ground wire as necessary.

3.2 Replacement of Fuse, Battery and Thermal Paper

Fuse

The fuse inside the receiver unit protects the equipment from overcurrent or reverse polarity. If the fuse blows, contact your dealer about replacement.

Name	Type	Code No.
Fuse	FGMB-A 125V 2A PBF	000-157-479-10

Battery

A battery is installed inside the display unit, and it preserves data when the power is turned off. The life of the battery is about 5-10 years, and its voltage is checked when the power is turned on. When its voltage is low, the BATTERY (■) icon appears on the display to alert you. When this happens, contact your dealer to request replacement of the battery.

Note: When the battery is dead, all default settings are restored.

Name	Type	Code No.
BATT	CR2450-F2ST2L	000-144-941

LCD Display

The life of the LCD is approx. 20,000 hour. When the LCD has expired, the brilliance cannot be raised.

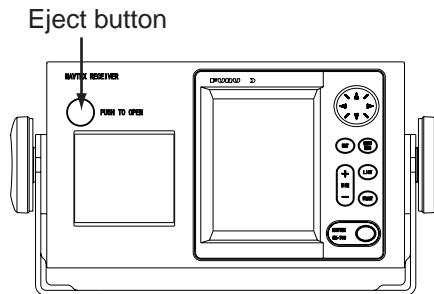

Thermal paper (NX-700A only)

When the thermal paper runs out completely, the message "Printer error" (center of screen) and the  icon (at the right-hand top corner) appear. Replace the paper as follows.

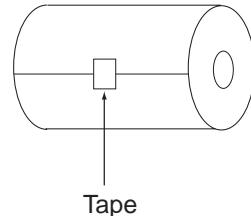

Note: Use only the specified thermal paper.

Name	Type	Code No.
Thermal paper	TP058-30CL	000-154-047

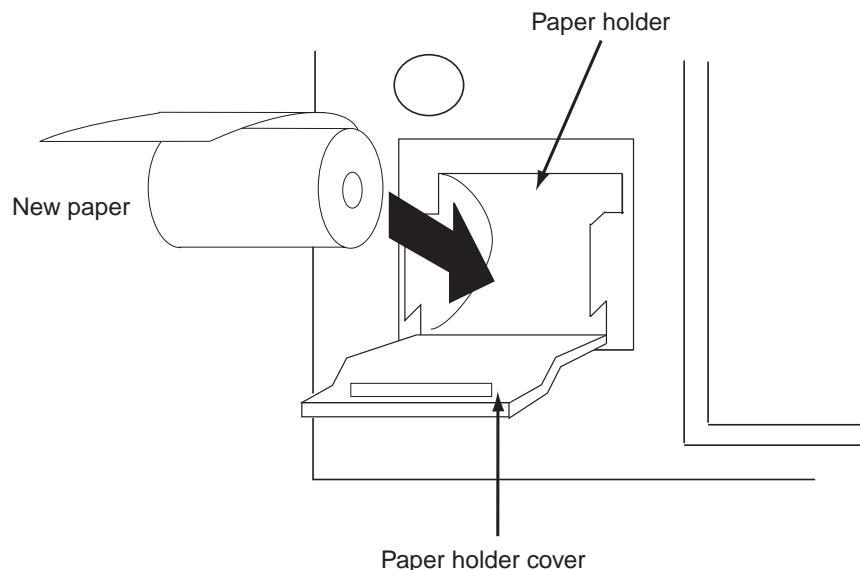

1. Turn off the power.
2. Press the button shown below to open the paper holder cover.

3. Peel the tape from the end of new paper.

4. Set the new paper in the paper container in the direction shown below.

5. Pull the end of the paper by 2 to 3 cm (as shown above), and then close the cover.

3.3 Troubleshooting

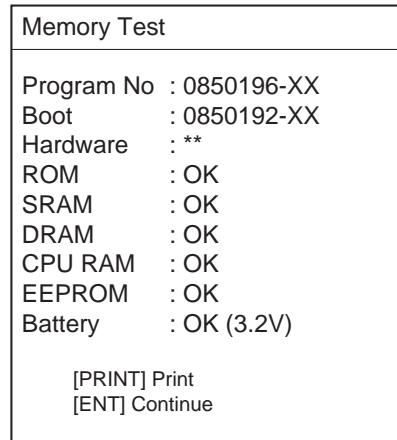

This section provides simple troubleshooting procedures which the user can follow to restore normal operation. If you cannot restore normal operation do not attempt to check inside the unit. Any trouble should be referred to a qualified technician.

If . . .	then . . .
you cannot turn on the power	-ask serviceman to replace the blown fuse. -check battery for proper voltage output.
the equipment receives unwanted messages.	confirm that Manual mode is chosen. (See paragraph 2.6.)
NAVTEX signal cannot be received.	check equipment by the diagnostic test. check the broadcasting schedule. check that the D-sub connector is firmly fastened. check that the antenna cable is firmly fastened.
paper does not advance. (NX-700A only)	load paper correctly.
paper feeds but no recording. (NX-700A only)	check if correct thermal paper is being used.
paper has darkened. (NX-700A only)	keep the paper in a well-ventilated and cool place.
the recording is not proper for the external printer. (NX-700B only)	check the setting of Printer on the System menu. check the printer cable. check that the power of printer is turned on. check that the printer is available. check that paper is set properly.

3.4 Diagnostics

The memory test checks ROM, RAM, data port, battery, keyboard and LCD for proper operation and displays program version numbers.

1. Press the **MENU/ESC** key to open the main menu.
2. Press **▼** to choose Service, and then press the **ENT** key.
3. Press **▲** or **▼** to choose Test, and then press the **ENT** key.
The message “Start test?” appears.
4. Press **◀** to choose “Yes”, and then press the **ENT** key.

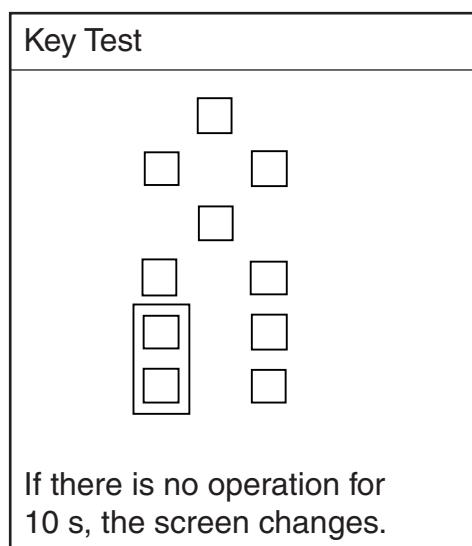

XX: Program version no.

**: Board version no.

Memory test

- For any NG (No Good), contact your dealer.
5. When the message “[ENT] Continue” appears at the bottom of screen, press ENT key to show the key test screen.

Key test

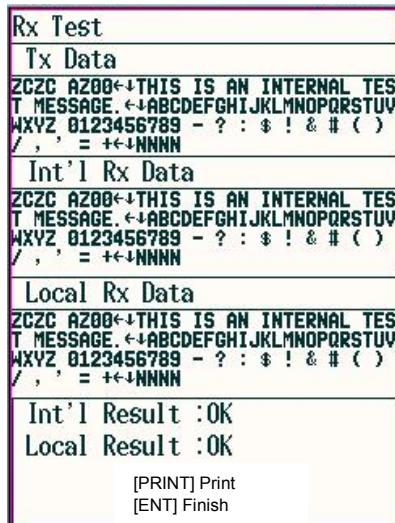

6. Press each key (except **↓** key) one by one.

A key is functioning properly if its on-screen location fills in black when the key is pressed.

3. MAINTENANCE & TROUBLESHOOTING

7. After all keys have been tested or no key is pressed after 10 seconds, the equipment starts the LCD test by showing the white and black display (level 0 to 9).
8. When the message “Hit any key” appears on the screen, press any key (except  key) to show the Rx test screen.

The alarm for receiving monitor sounds while the Rx test is being conducted.

Rx test

9. When the message “[ENT] Finish” appears on the screen, press the **ENT** key or wait for one minute with no operation to finish.
Also the test message is printed by pressing **PRINT** key when the item other than “None” at Printer on System menu.
10. Press the **MENU/ESC** key several times to close the menu.

3.5 Restoring all Default Settings

This operation restores all default settings. The following two settings, however, are not disturbed.

- Received messages
- NAVTEX stations list (See paragraph 2.13.)

1. Press the **MENU/ESC** key to show the main menu.
2. Press **▼** to choose Service, and then press the **ENT** key.
3. Press **▲** or **▼** to choose Default Setting, and then press **ENT** key.
The message “Restore default settings?” appears.
4. Press **◀** to choose “Yes”, and then press the **ENT** key.
The Service menu appears.
5. Press the **MENU/ESC** key several times to close the menu.

4. INSTALLATION

4.1 Display Unit

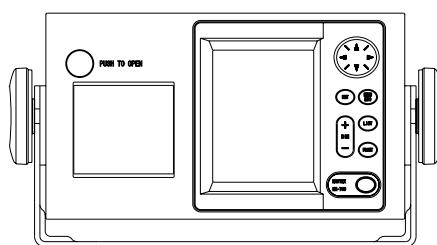

The display unit can be installed on a tabletop, on the overhead, or in a panel. Refer to the outline drawings at the back of this manual for installation instructions. When selecting a mounting location, keep in mind the following points.

- Locate the unit away from exhaust pipes and vents.
- Locate it of direct sunlight, (or in a suitable, ventilated enclosure) to prevent heat which can build up inside the cabinet.
- The mounting location should be well ventilated.
- Mount the unit where shock and vibration are minimal.
- Allow sufficient maintenance space at the sides and rear of the unit and leave sufficient slack in cables, to facilitate maintenance and servicing.
- Compass safe distances are:
NX-700A (Standard: 1.45 m, Steering: 0.95 m)
NX-700B (Standard: 0.30 m, Steering: 0.30 m)

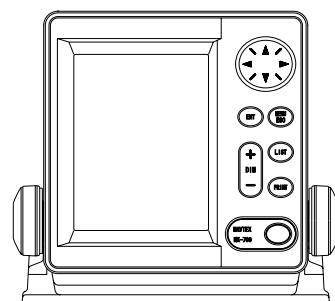

Tabletop, overhead mounting

1. Fix the hanger by using four self-tapping screws (5x20).
2. Screw knob bolts in display unit, set it to the hanger, and tighten the knob bolts.

Note: For the overhead mounting, reinforce the mounting location for the weight of the display unit (NX-700A: 3.3 kg, NX-700B: 0.7 kg) and secure the hanger, with bolts, nuts and washers (local supply).

NX-700A

NX-700B

4. INSTALLATION

Flush mounting

The display unit can be installed flush mounted in a console or panel by using the optional flush mount kit.

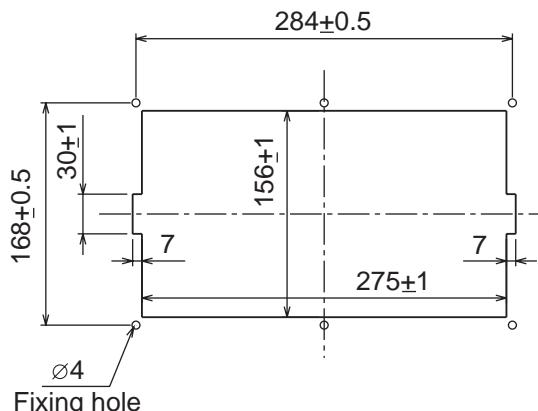

(For NX-700A)

Type: OP08-19

Code No.: 004-515-260

Name	Type	Code No.	Qty	Remarks
Mounting metal	08-023-1019	100-326-960	1	
Self-tapping screw	5X20	000-802-081	6	
Hex. bolt	M8x15	000-862-144	2	
Spring washer	M8	000-864-262	2	

- Cut out a hole with dimensions as shown below in the mounting location.

- Attach the fixing metal to the display unit with two hex. bolts (M8x15, supplied with optional kit) and spring washers (supplied with optional kit).
- Fasten six self-tapping screws to fix the display unit to the mounting location.

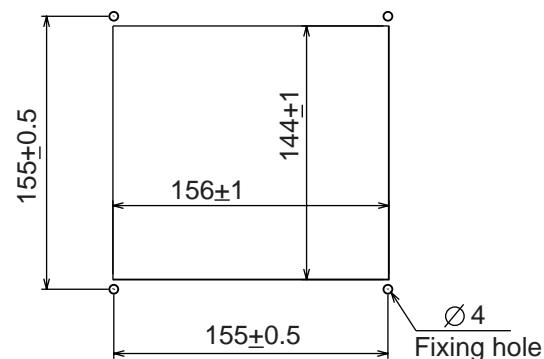

(For NX-700B)

Type: OP08-20

Code No.: 004-515-270

Name	Type	Code No.	Qty	Remarks
Mounting metal	08-023-2011	100-327-010	1	
Self-tapping screw	5x20	000-802-081	4	
Pan head screw	M4x12	000-802-130	4	

- Cut out a hole with dimensions as shown below in the mounting location.

- Attach the fixing metal to the display unit with four pan head screws (M4X12, supplied with the optional kit).
- Fasten four self-tapping screws (supplied with the optional kit) to fix the display unit to the mounting location.

4.2 Receiver Unit

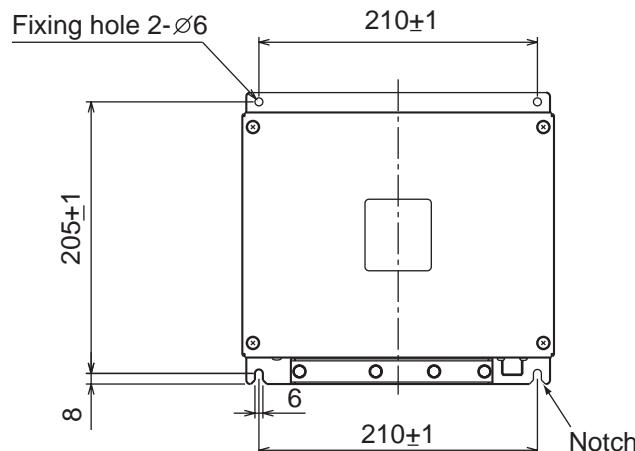

General mounting considerations

- The mounting location should be well ventilated and dry.
- The unit can be mounted on bulkhead or the desk.
- Secure the maintenance space shown in drawing at the back of this manual for ease of maintenance and service.
- Compass safe distances are:
Standard: 1.15 m, Steering: 0.75 m

Mounting Method

Fasten the receiver unit with four self-tapping screws (5x20, supplied as installation material). For bulkhead mounting, do the follows.

1. Tighten lower self-tapping screws so there is 5 mm clearance between bottom of screw head and bulkhead.
2. Hook the receiver unit on the lower screws.
3. Tighten upper screws followed by the lower screws.

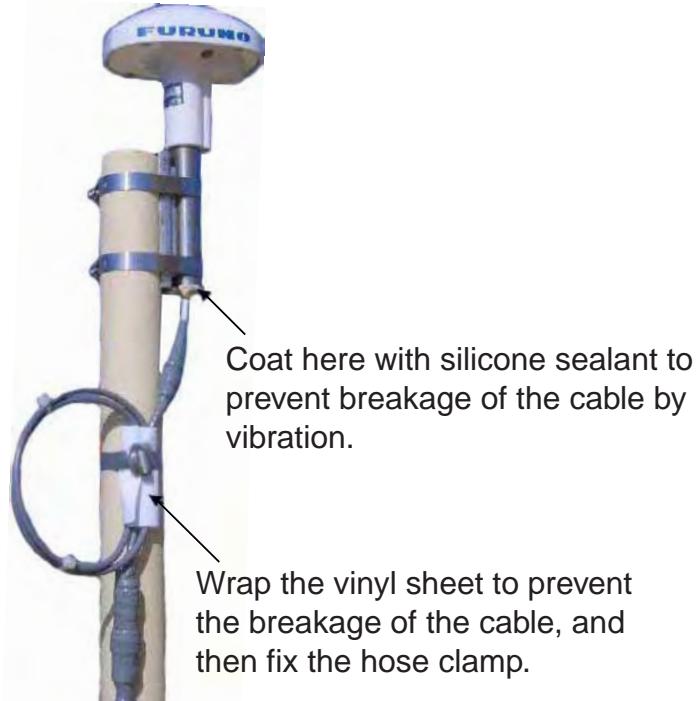

4.3 Antenna Unit

Mounting considerations

Install the antenna unit referring to the antenna installation diagram at the back of this manual. When selecting a mounting location for the antenna unit, keep in mind the following points:

- Do not shorten the antenna cable.
- Do not install the antenna unit within beamwidth of the radar.

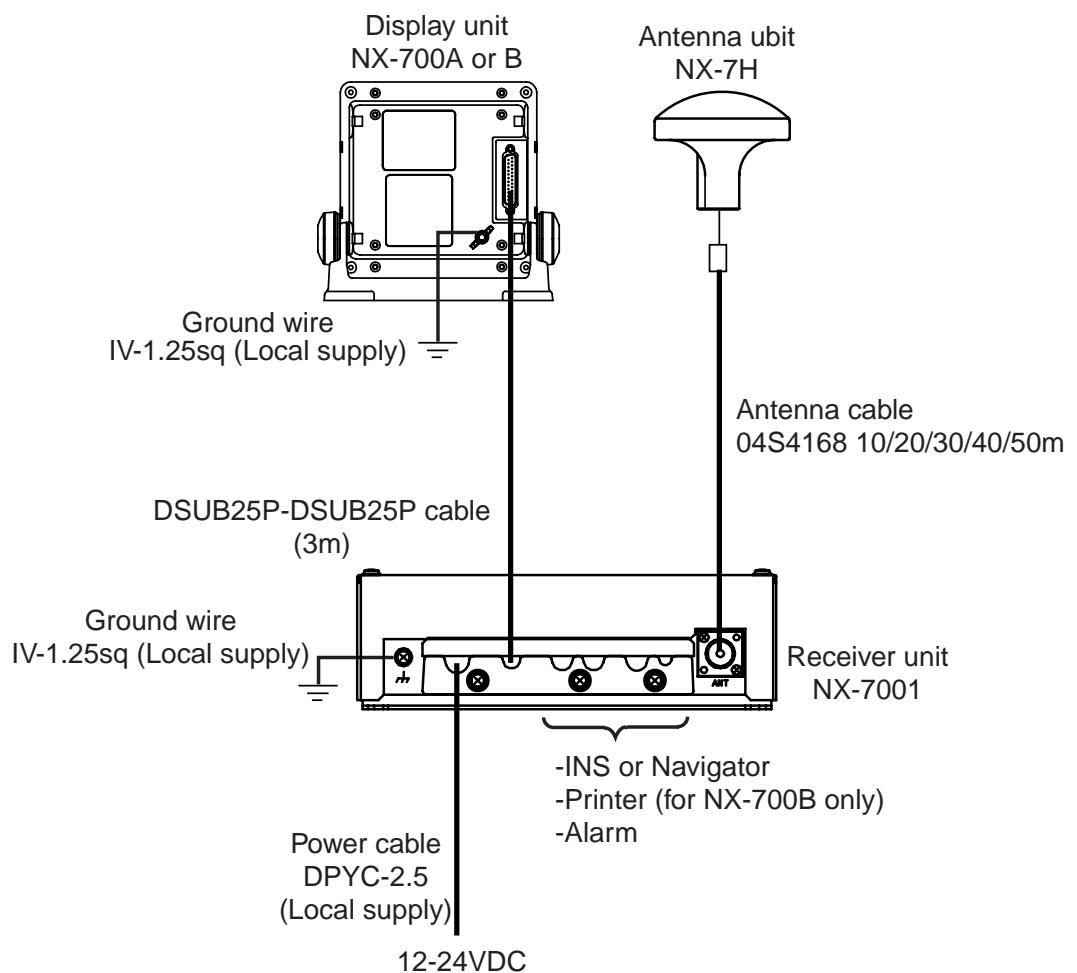

4.4 Printer (NX-700B only)

Prepare the printer by locally as shown below for the NX-700B.

- Serial RS-232C
- Serial printer
- Baud Rate: 9600 bps
- Character length: 8 bit
- Parity: No
- Flow control: Xon/Xoff
- 32 characters/line or more

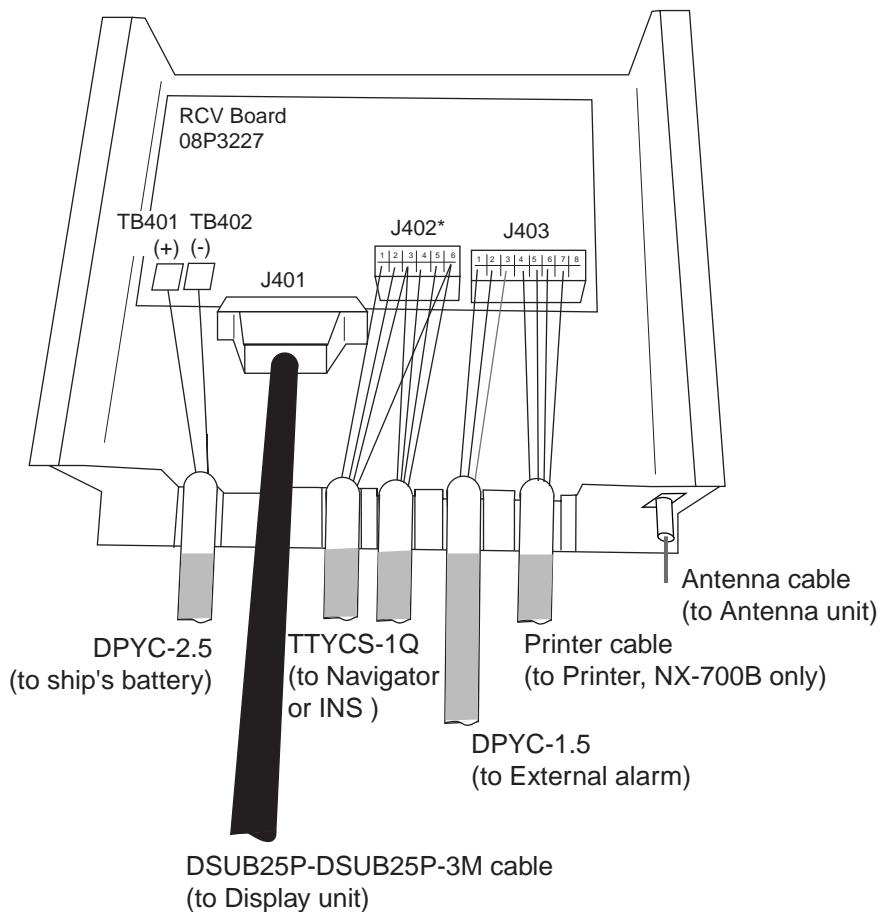

4.5 Wiring

4. INSTALLATION

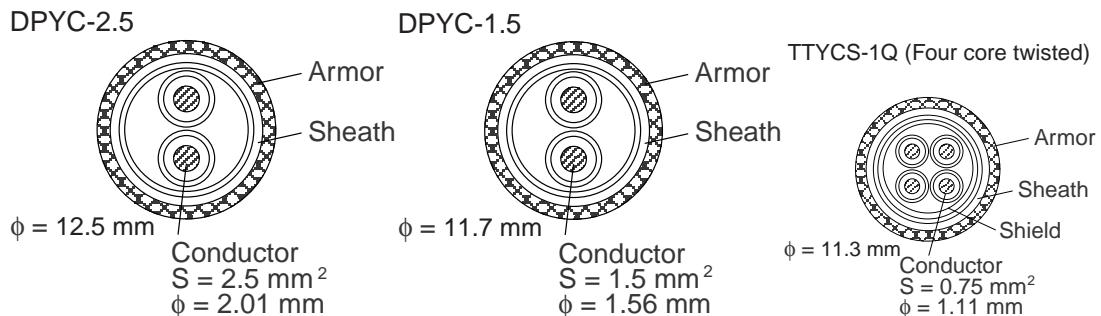

Receiver unit

All cables are gathered to the receiver unit. Connect cables at inside of the receiver unit as shown below.

Receiver unit, inside view

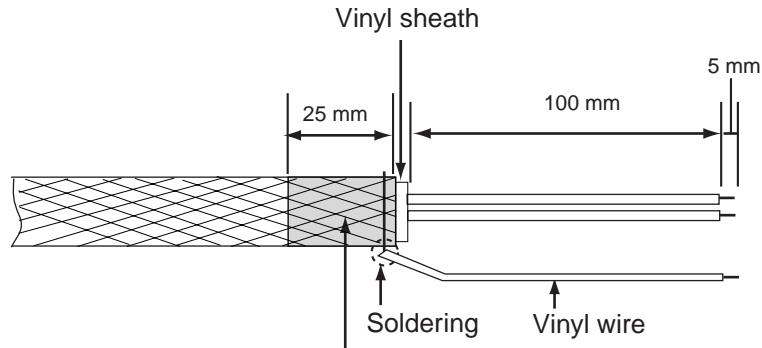

Use the following JIS cable (Japan Industrial Standard) or equivalent to connect power source, INS and external alarm appropriately.

For printer, use the cable supplied with the printer.

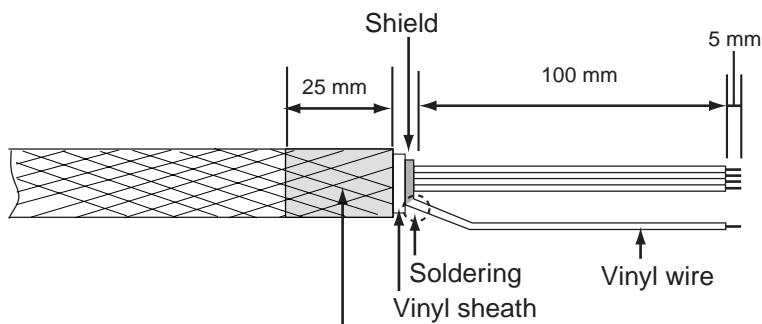

Fabricate these cables as below to connect to the receiver unit.

DPYC-1.5 (For external alarm)

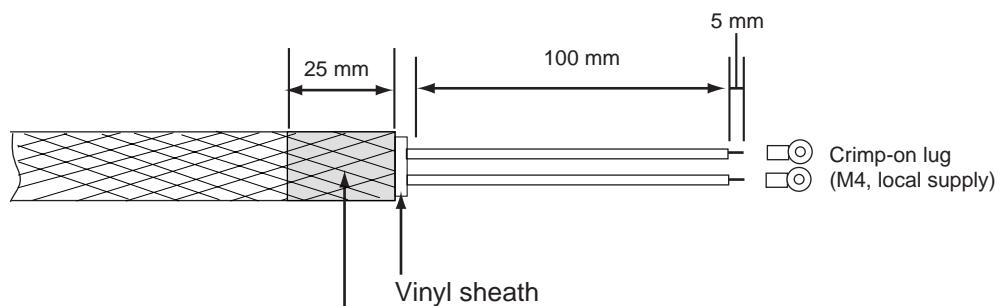

Scrape the paint off the cable
where the cable contacts the cable clamp.

TTYCS-1Q (For Navigator or INS)

Scrape the paint off the cable
where the cable contacts the cable clamp.

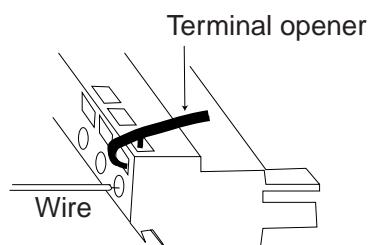

DPYC-2.5 (For ship's battery)

Scrape the paint off the cable
where the cable contacts the cable clamp.

How to use J402 and 403 connector

1. Insert the terminal opener (attached in the receiver unit) into the connector.
2. Insert a wire in terminal while pressing and holding the terminal opener.
3. Release the terminal opener. Pull wire to confirm that it is connected firmly.

4. INSTALLATION

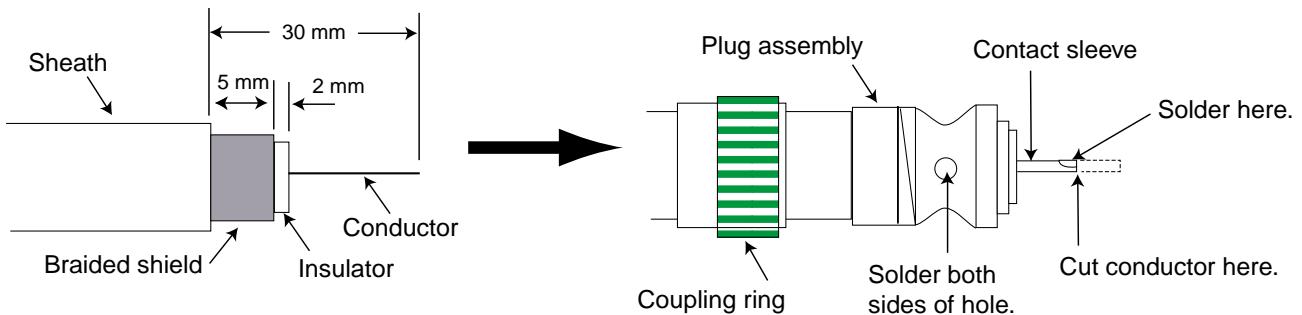

Antenna cable

Be sure to leave some slack in the cable for future service and maintenance.

For RG-10/UY, RG-214 cable

When using the coaxial cable, type RG-10/UY or RG-214, attach the FM-MP-7 connector (supplied as installation material) or PL-259 (local supply) as below.

1. Remove the sheath by 30 mm.
2. Bare 23 mm of the center conductor. Trim braided shield by 5 mm and tin.
3. Slide coupling ring onto cable.
4. Screw the plug assembly on the cable.
5. Solder plug assembly to braided shield through solder holes. Solder contact sleeve to conductor.
6. Screw coupling ring into plug assembly.

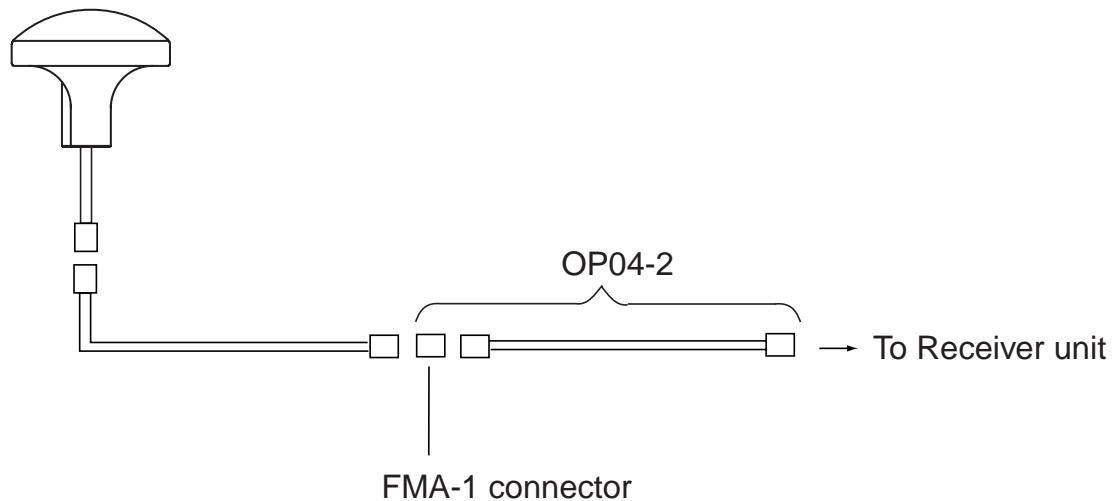

Note: When the RG-214 cable is used, care must be exercised to prevent damage to the cable as it has no armor.

Extending antenna cable length

When connecting two cables for extension, use optional extension cable kit OP-04-2.

Code No.: 000-041-174 (10 m), 000-041-175 (20 m), 000-041-176 (30 m),
000-041-177 (40 m), 000-041-178 (50 m)

Name	Type	Code No.	Qty	Remarks
Cable assy	04S4168	005-948-320	1	10 m w/connectors
		005-948-330		20 m w/connectors
		005-948-340		30 m w/connectors
		005-948-350		40 m w/connectors
		005-948-360		50 m w/connectors
Connector	FMA-1	000-152-964-10	1	
Insulating tape	U tape 0.5x19x5M	000-800-985	1	

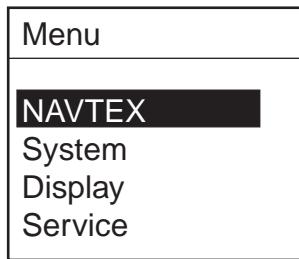

**Grounding**

The ground wire (local supply) should be 1.25 sq or larger. The ground wire should be as short as possible.

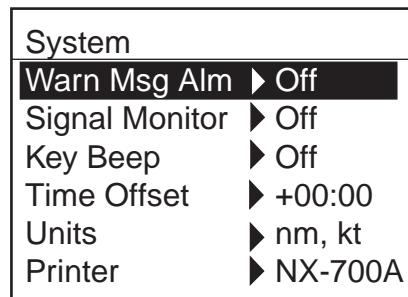

4.6 Setting of Printer

After the connection completely, the setting of printer should be done for NX-700B as shown below. (For NX-700A, use the default setting as is.)

1. Press the  key to turn the power on.
2. Press the **MENU** key to show the main menu.

3. Press **▼** to choose System, and then press the **ENT** key or **►** to activate the System menu.

4. Press **▼** to choose Printer, and then press the **ENT** key or **►** to show the item window.

5. Press **▲** or **▼** to choose the appropriate setting, and then press the **ENT** key.

None: When no printer is connected.

NX-700A: For NX-700A only.

Upright: When NX-700B is connected to an upright-type printer which ejects paper in bottom to top direction.

Inverted: When NX-700B is connected to a bulkhead mount printer which ejects paper in top to bottom direction.

6. Press the **MENU** key several times to close the menu.

4.7 Digital Interfacing

This equipment can receive navigation data in IEC 61162-1 Ed4/2 format.

Priority

TIME & DATE	ZDA
L/L	GNS > GGA > RMC > GLL
SOG	VTG > VBW > RMC
STW	VHW > VBW
COG	VTG > RMC

Input data sentence description

ACK: Acknowledge

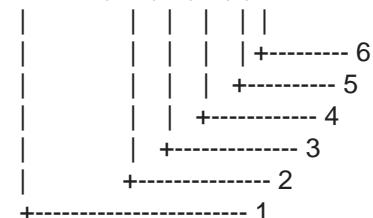

\$--ACK,xxx*hh<CR><LF>

1. Unique alarm number (identifier)
 2. Checksum

ACN: Alert command

\$--ACN, hhmmss.ss, aaa, x.x, x.x, c, a*hh<CR><LF>

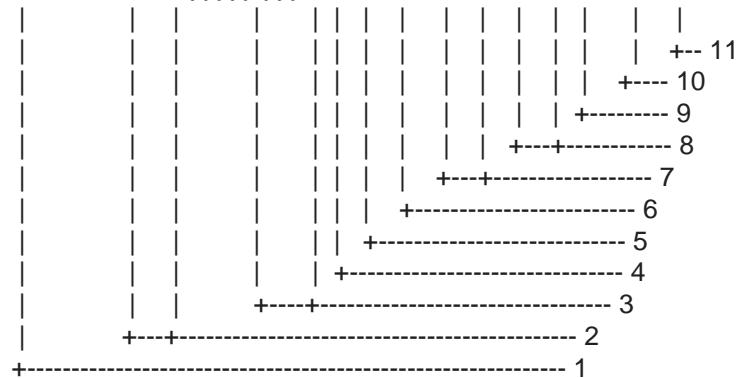

1. Time
 2. Manufacturer mnemonic code
 3. Alert identifier
 4. Alert instance (1 - 999999)
 5. Alert command (A=acknowledge, Q=request/repeat information, O=responsibility transfer, S=silence)
 6. Sentence status flag

4. INSTALLATION

GGA: GPS position fixing condition

\$--GGA, hhmmss.ss, llll.lll, a, yyyy.yyy, a, x, xx, x.x, x.x, M, x.x, M, x.x, xxxx*hh<CR><LF>

1. UTC of position
2. Latitude, N/S
3. Longitude, E/W
4. GPS quality indicator (see note)
5. Number of satellite in use, 00-12, may be different from the number in view
6. Horizontal dilution of precision
7. Antenna altitude above/below mean sealevel, m
8. Geoidal separation, m
9. Age of differential GPS data
10. Differential reference station ID, 0000-1023
11. Checksum

NOTE

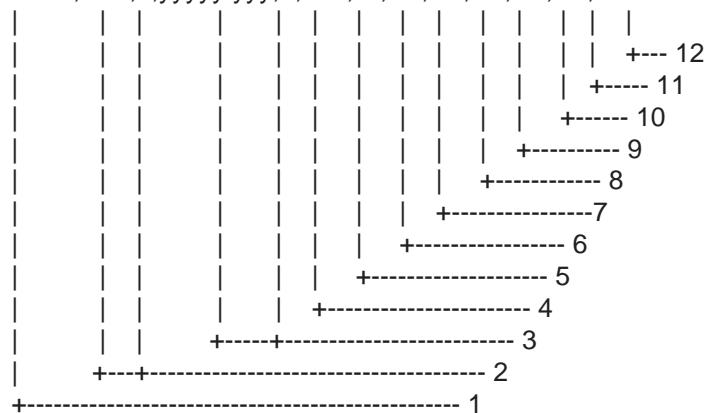

- 0 = fix not available or invalid
- 1 = GPS SPS mode, fix valid
- 2 = differential GPS, SPS mode, fix valid
- 3 = GPS PPS mode, fix valid
- 4 = Real Time Kinetic. Satellite system used in RTK mode with fixed integers
- 5 = Float RTK. Satellite system used in RTK mode with floating fingers
- 6 = Estimated (dead reckoning) mode
- 7 = Manual input mode
- 8 = Simulator mode

The GPS quality indicator shall not be a null field.

4. INSTALLATION

GNS: GNSS fix data

\$--GNS,hmmss.ss,||||.|||,a,yyyyy.yyy,a,c--c,xx,x.x,x.x,x.x,x.x,a*hh<CR><LF>

1. UTC of position
2. Latitude, N/S
3. Longitude, E/W
4. Mode indicator (SEE NOTE 1)
5. Total number of satellites in use, 00-99
6. HDOP
7. Antenna altitude, metres, re:mean-sea-level (geoid)
8. Geoidal separation
9. Age of differential data
10. Differential reference station ID
11. Navigational status indicator (SEE NOTE 2)
12. Checksum

NOTE1 Positioning system Mode indicator:

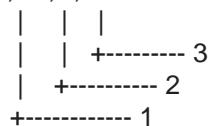

A = Autonomous, D = Differential, E = Estimated (dead reckoning),
F = Float Real time kinematic, M = Manual input, N = No fix,
P = Precise, R = Real time kinematic, S = Simulator

NOTE2 The navigational status indicator:

S = Safe, C = Caution, U = Unsafe,
V = Navigational status not valid

HBT: Heart beat supervision

\$--HBT,x.x,A,x*hh<CR><LF>

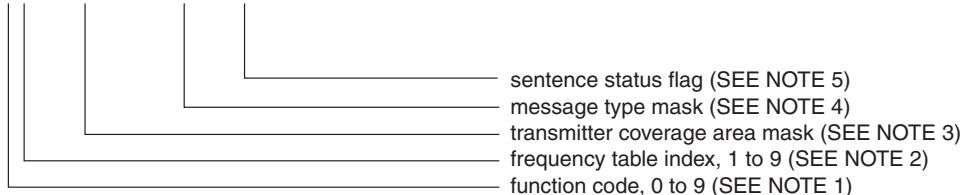

1. Configured repeat interval (1 to 999, Null)
2. Equipment status (A/V)
3. Sequential sentence identifier (0 to 9)

NRM: NAVTEX receiver mask

This command is used to manipulate the configuration masks that control which messages are stored, printed and sent to the INS port of the NAVTEX receiver.

\$--NRM,x,x,hhhhhhh,hhhhhhh,a*hh<CR><LF>

NOTE 1: The function code is used to further identify the purpose of the sentence. The meaning of the function code is as follows:

- 0 - request messages for the given mask
- 1 - set/report the storage mask
- 2 - set/report the printer mask
- 3 - set/report the INS mask
- 4 to 9 - reserved for future use

NOTE 2: The frequency indicator identifies the frequency that the NAVTEX message was received on:

- 1 = 490 kHz
- 2 = 518 kHz
- 3 = 4209.5 kHz
- 4 through 9 are reserved for future use

NOTE 3: The transmitter coverage area mask is defined as a 32 bit hex field where the least significant bit represents transmitter coverage area "A", the next bit is "B" and so on up to bit 25 which is "Z". Bits 31 through 26 are reserved for future use and are set to zero. To select a transmitter coverage area, its corresponding bit should be set to one. To deselect a transmitter coverage area its corresponding bit should be set to zero.

NOTE 4: The message type mask is defined as a 32 bit hex field where the least significant bit represents message type "A", the next bit is "B" and so on up to bit 25 which is "Z". Bits 31 through 26 are reserved for future use and are set to zero. To select a message type its corresponding bit should be set to one.

NOTE 5: This field is used to indicate a sentence that is a status report of current settings or a configuration command changing settings. This field should not be null.

R = Sentence is a status report of current settings (use for a reply to a query).

C = Sentence is a configuration command to change settings. A sentence without "C" is not a command.

When another device (for example an INS) wishes to set one or more of the bit masks it sends one or more NRM sentences to the NAVTEX receiver. When another device wishes to determine the current values of the bit masks it sends a query sentence to the NAVTEX receiver as follows:

\$--CRQ, NRM*hh<CR><LF>

On receiving this query, the NAVTEX receiver will respond with one NRM sentence for each mask type and frequency combination that it supports. For example a NAVTEX receiver which support separate storage, printer and INS masks for each of three receiver frequencies will return a total of nine NRM sentences in response to the above query.

Example

\$INNRM,2,1,00001E1F, 00000023*57

This example specifies that message identifiers "A", "B" and "F", received from transmitter areas "A" to "E" and "J" to "M" on 490 kHz should be sent to the printer port when they are received. Note that this command sets the printer mask for future use; there is no immediate output generated as a result of receiving this command.

Example

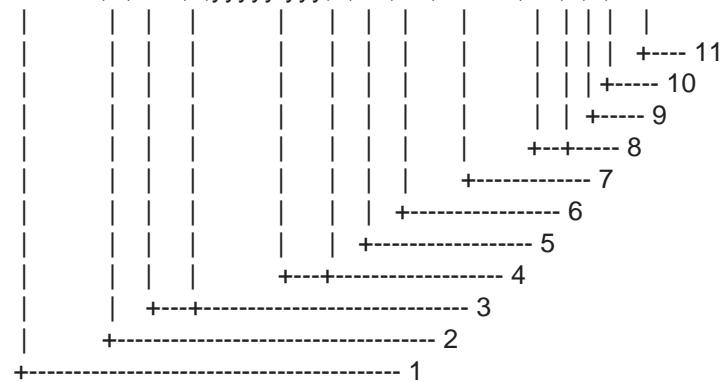

\$INNRM,0,2,00001E1F,0FFFFFF*21

This example requests that all currently stored messages of all message type, received from transmitter areas "A" to "E" and "J" to "M" on 518 kHz should be immediately returned to the requesting device as a series of NRX sentences. Note that this command does not update any of the stored masks.

4. INSTALLATION

RMC: Recommend Minimum Specific GNSS Data

\$--RMC, hhmmss.ss, A, llll.lll, a, yyyy.yyy, a, x.x, x.x, xxxxxx, x.x, a, a, a*hh<CR><LF>

1. UTC of position fix
2. Status: A=data valid, V=navigation receiver warning
3. Latitude, N/S
4. Longitude, E/W
5. Speed over ground, knots
6. Course over ground, degrees true
7. Date: dd/mm/yy
8. Magnetic variation, degrees E/W
9. Mode indicator (see note1)
10. Navigational status (see note2)
11. Checksum

NOTE1 Positioning system Mode indicator:

A = Autonomous
D = Differential
E = Estimated (dead reckoning)
F = Float Real time kinematic
M = Manual input
N = Data not valid
P = Precise
R = Real time kinematic
S = Simulator

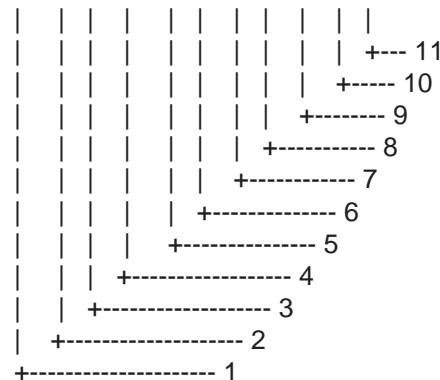

The Mode indicator field supplements the Status field. The Status field shall be set to V=invalid for all values of Operating Mode except for A=Autonomous and D=Differential. The positioning system Mode indicator and Status field shall not be null fields.

NOTE2 The navigational status indicator is according to IEC 61108 requirements on 'Navigational (or Failure) warnings and status indications'. This field should not be a NULL field and the character should take one of the following values:

S = Safe
C = Caution
U = Unsafe
V = Navigational status not valid

VBW: Dual ground/water speed

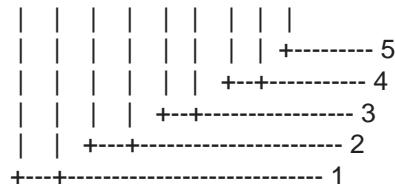

```
$--VBW,x.x,x.x,A,x.x,x.x,A,x.x,A,x.x,A*hh<CR><LF>
```

1. Longitudinal water speed, knots
2. Transverse water speed, knots
3. Status: water speed, A=data valid V=data invalid
4. Longitudinal ground speed, knots
5. Transverse ground speed, knots
6. Status: ground speed, A=data valid V=data invalid
7. Stern transverse water speed, knots
8. Status: stern water speed, A=data valid V=data invalid
9. Stern transverse ground speed, knots
10. Status: stern ground speed, A=data valid V=data invalid
11. Checksum

VHW: Water speed and heading

```
$--VHW,x.x,T,x.x,M,x.x,N,x.x,K*hh<CR><LF>
```

1. Heading, degrees true
2. Heading, degrees magnetic
3. Speed, knots
4. Speed, km/h
5. Checksum

4. INSTALLATION

VTG: Course over ground and ground speed

\$--VTG,x.x,T,x.x,M,x.x,N,x.x,K,a*hh<CR><LF>

								+----- 6
							+----- 5	
				+---+----- 4				
			+--+----- 3					
		+--+----- 2						
+----- 1								

1. Course over ground, degrees true
2. Course over ground, degrees magnetic
3. Speed over ground, knots
4. Speed over ground, km/h
5. Mode indicator (see note)
6. Checksum

NOTE Positioning system Mode indicator:

A = Autonomous, D = Differential, E = Estimated (dead reckoning), M = Manual input,
N = Data not valid, P = Satellite system used in precision, S = Simulator

The positioning system Mode indicator field shall not be a null field.

ZDA: Time and date

4. Year(UTC)
5. Local zone hours, 00h to +13h
6. Local zone minutes, 00 to +59 as local hours
7. Checksum

PFEC,nxfrq : LOCAL FREQUENCY

\$PFEC,nxfrq,x*hh<CR><LF>

				+----- 5			
			+----- 4				
		+----- 3					
	+----- 2						
+----- 1							

1. Proprietary sentence ID
2. Manufacturer's Mnemonic code: Furuno Electric Co.,Ltd.
3. Manufacturer's Data: Local frequency setting command
4. Manufacturer's Data: Local frequency indicator (SEE NOTE)
5. Checksum

NOTE Local frequency indicator:

0 = 490kHz, 1 = 4209.5kHz

Output data description

ALC: Cyclic alert list

\$--ALC,xx,xx,xx,x.x,aaa,x.x,x.x,x.x,.....,aaa,x.x,x.x,x.x*hh<CR><LF>

A vertical number line starting at 1 and ending at 9. The numbers are placed to the right of the line. There are dashed vertical grid lines extending upwards from each integer, creating a grid pattern.

1. Total number of sentences for this message (01 - 99)
 2. Sentence number (01 - 99)
 3. Sequential message identifier (00 - 99)
 4. Number of alert entries
 5. Manufacturer mnemonic code _____
 6. Alert identifier _____ Alert entry 1
 7. Alert instance _____
 8. Revision counter _____
 9. Additional Alert entries (same as 5 to 8)

ALF: Alert sentence

\$--ALF,x,x,x,hhmmss.ss,a,a,a,aaa,x.x,x.x,x.x,x,c---c*hh<CR><LF>

A diagram consisting of a series of vertical dashed lines. Horizontal dashed lines connect specific points on these lines to a sequence of numbers:

- Point 1: Bottom-most horizontal dashed line.
- Point 2: Second horizontal dashed line from the bottom.
- Point 3: Third horizontal dashed line from the bottom.
- Point 4: Fourth horizontal dashed line from the bottom.
- Point 5: Fifth horizontal dashed line from the bottom.
- Point 6: Sixth horizontal dashed line from the bottom.
- Point 7: Seventh horizontal dashed line from the bottom.
- Point 8: Eighth horizontal dashed line from the bottom.
- Point 9: Ninth horizontal dashed line from the bottom.
- Point 10: Tenth horizontal dashed line from the bottom.
- Point 11: Eleventh horizontal dashed line from the bottom.
- Point 12: Twelfth horizontal dashed line from the bottom.
- Point 13: Top-most horizontal dashed line.

1. Total number of ALF sentences for this message (1 - 2)
 2. Sentence number (1 - 2)
 3. Sequential message identifier (0 - 9)
 4. Time of last change
 5. Alert category (A = Category A, B = Category B, C = Category C, NULL)
 6. Alert priority (E = Emergency Alarm, A = Alarm, W = Warning, C = Caution, NULL)
 7. Alert state (V = active - unacknowledged, S = active - silenced,
A = active - acknowledged or active, O = active - responsibility transferred,
U = rectified - unacknowledged, N = normal, NULL)
 8. Manufacturer mnemonic code
 9. Alert identifier
 10. Alert instance (1 - 999999)
 11. Revision counter (1 - 99)
 12. Escalation counter (0 - 9)
 13. Alert text

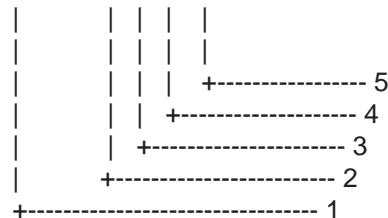

(Continued on next page)

4. INSTALLATION

	Alert identifier	Vender code	Alert category	Alert priority	Alert text (Where sentence no.=1)	Alert text (Where sentence no.=2)
B2 (Type of message)	001	B	Warning	NAV WRN	NAVTEX: Navigational warning	
B2 (Type of message)	002	B	Warning	MET WRN	NAVTEX: Meteorological warning	
B2 (Type of message)	003	A	Warning	SAR	NAVTEX: Search and rescue information	
Printer Error	420051	FEC	B	Warning	PRN ERR	NAVTEX: Printer Error
Battery Error	420052	FEC	B	Warning	BAT ERR	NAVTEX: Battery Error
BAM COM ERROR	420950	FEC	B	Caution	BAM COM ERR	NAVTEX: Communication Error with BAM

ALR: Set alarms

\$CRALR, hhmmss.fff, A, A, c--c<CR><LF>

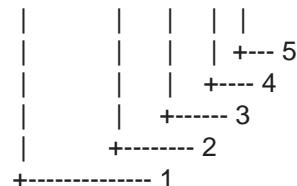

1. Time of alarm condition change, UTC
2. Local alarm number(identifier) (SEE NOTE)
3. Alarm condition(A=threshold exceeded, V=not exceeded)
4. Alarm's acknowledge state, A=acknowledged V=unacknowledged
5. Alarm's description text (SEE NOTE)

NOTE:

	“2. Local alarm number (identifier)”	“5. Alarm’s description text”
B2 (Type of message): A or L	001	NAVTEX: Navigational warning
B2 (Type of message): B	002	NAVTEX: Meteorological warning
B2 (Type of message): D	003	NAVTEX: Search and rescue information
Printer Error	051	NAVTEX: Printer Error
Battery Error	052	NAVTEX: Battery Error
Errors other than above	006	NAVTEX: General failure

ARC: Alert command refused

\$--ARC, hhmmss.ss, aaa, x.x, x.x, c*hh<CR><LF>

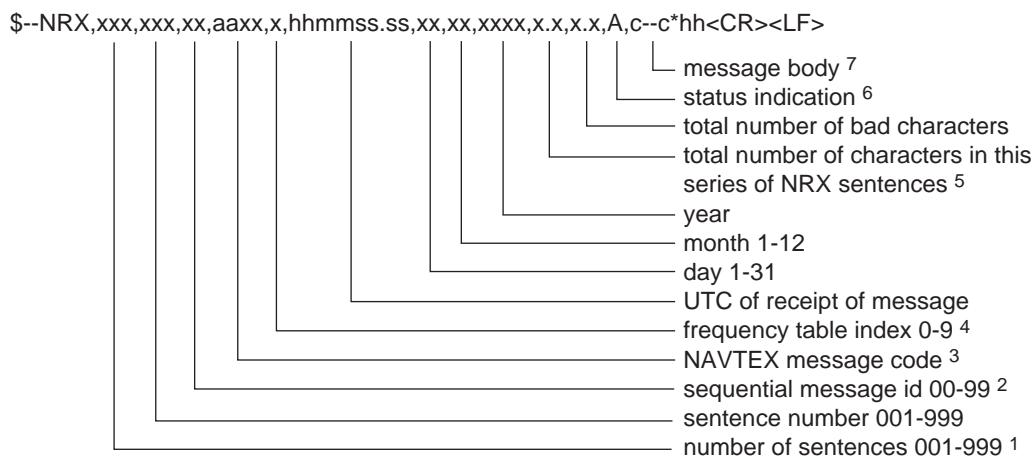

1. Time
2. Manufacturer mnemonic code
3. Alert identifier
4. Alert instance (1 - 999999)
5. Refused alert command (A = acknowledge, Q = request/repeat information, O = responsibility transfer, S = silence)

HBT: Heart beat supervision (See page 4-14.)

NRX: NAVTEX received message

The NRX sentence is used to transfer the contents of a received NAVTEX message from the NAVTEX receiver to another device. As the length of a single NAVTEX message may exceed the number of characters permitted in a single sentence, many NRX sentences may be required to transfer a single NAVTEX message.

NOTE 1: The total number of sentences required to transfer the NAVTEX message from the NAVTEX radio receiver. The first field specifies the total number of sentences used for a message, minimum value 1. The Sentence Number field identifies the order of this sentence in the message, minimum value 1. All sentences contain the same number of fields. For efficiency it is recommended that null fields be used in the additional sentences where the data is unchanged from the first sentence (this applies to fields 4 through 12).

NOTE 2: The sequential message identifier provides a unique identifier for each NAVTEX message represented by a group of sentences. Though the message code (field 4) contains a NAVTEX message serial number, there are special cases when the message serial number is set to 00 and has a different meaning or when the same message code can occur more than once. When these conditions occur, the sequential message identifier can be relied upon to uniquely identify this NAVTEX message from other NAVTEX messages with the same message code.

NOTE 3: The NAVTEX message code contains three related entities. The first character identifies the transmitter coverage area and the second character identifies the type of message. Both these characters are as defined in Table I of Recommendation ITU-R M.625-3, combination numbers 1-26. Transmitter identification characters are allocated by the IMO NAVTEX manual (IMO publication 951E). The remaining two characters are restricted to numerals with a range of 00 to 99 and represent a serial number for each type of message. The value of 00 is a special case and not considered a serial number.

NOTE 4: The frequency indicator identifies the frequency that the NAVTEX message was received on:

- 0 = not received over air (eg test messages)
 - 1 = 490 kHz
 - 2 = 518 kHz
 - 3 = 4209,5 kHz
 - 4 through 9 are reserved for future use

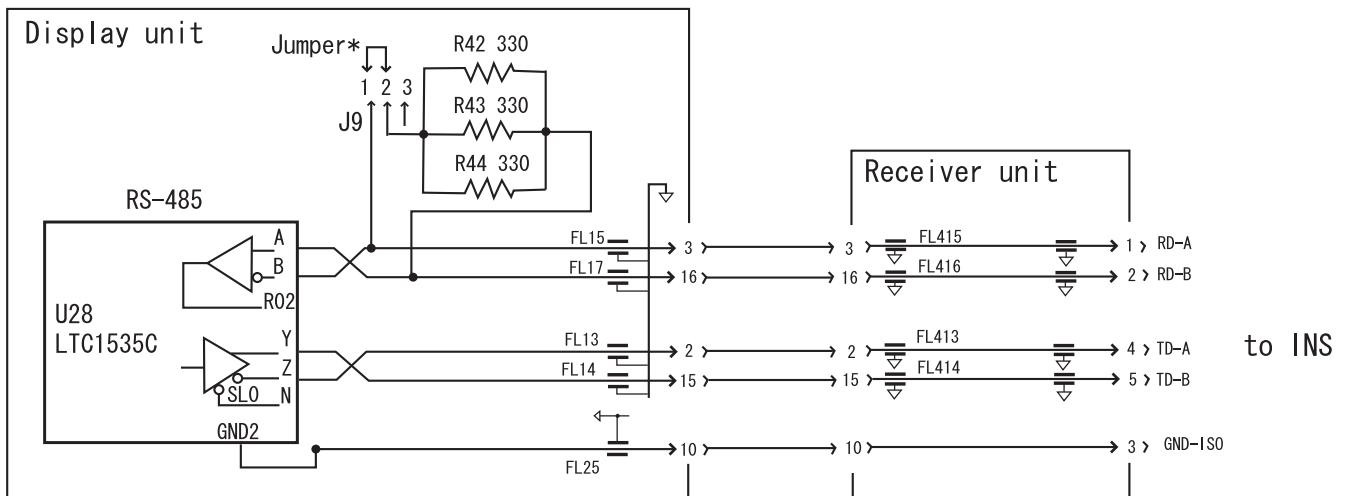

NOTE 5: The total number of characters indicates the expected size of the message body sent in this sequence of NRX sentences. It does not include the additional overhead for reserved characters found in table 1 of IEC 61162-1.

NOTE 6: Status "A" is used for syntactically correct message reception. Status "V" is used for syntactically incorrect message reception, e.g. end characters NNNN missing.

NOTE 7: The message body may contain reserved characters as defined in IEC 61162-1.

4. INSTALLATION

Serial Interface

*When only NX-700A/B is listener for talker:

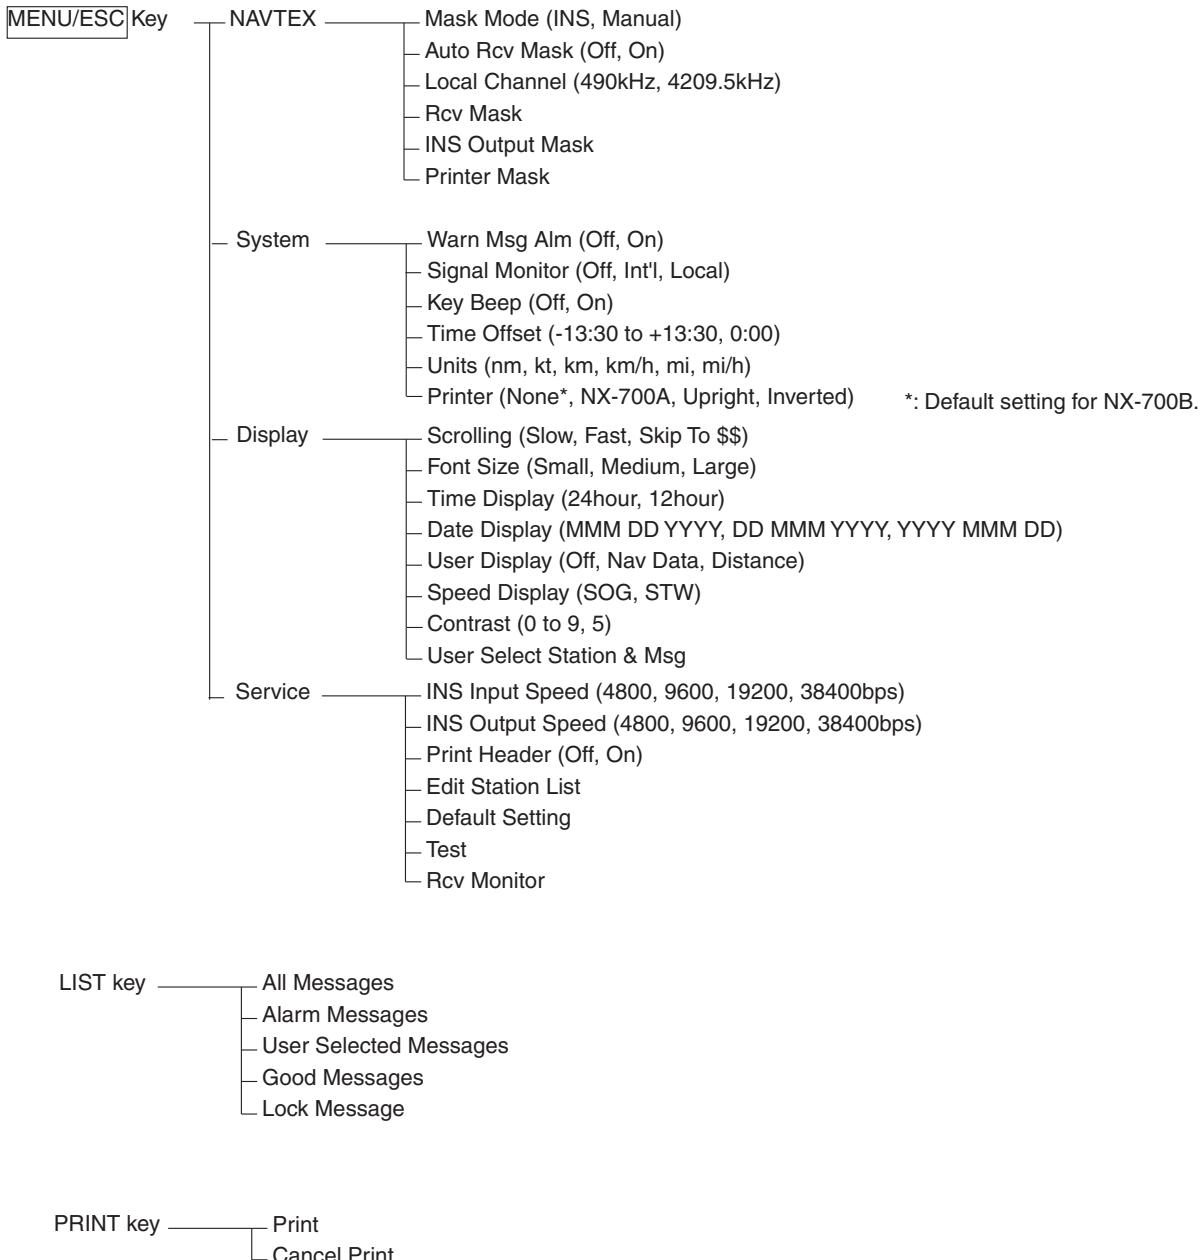

Short #1 and 2 (default setting).

When multiple listeners (including NX-700A/B) for talker:

NX-700A/B is the end of bus; Short #1 and 2.

Besides above; Short #2 and 3.

APPENDIX 1 MENU TREE

APPENDIX 2 ALARM MESSAGES

When an internal error occurs or a message is received, a user is notified of it on the pop-up message display.

Text	Meaning	Remedy
Printer error Hit any key.	Printer error (no paper, not connected to the printer, etc.).	- Check if the thermal paper runs out (NX-700A only). If no paper, see "Thermal paper (NX-700A only)" on page 3-3. Press any key. - Check if the printer and the NX-700A/B are firmly connected. If no connection to the printer, see section 3.3.
Battery error Hit any key.	Appears when the voltage of the internal battery is low.	See "Battery" on page 3-2.
Received new int'l msg. Display new msg? Yes No	Appears when a message other than an SAR message is received.	For an SAR message, check its message. For other messages, check their message as appropriate.

**SPECIFICATIONS OF NAVTEX RECEIVER
NX-700A/B****1 NAVTEX RECEIVER**

1.1	Receiving frequency	518 kHz and 490 kHz (or 4209.5 kHz), receive both frequencies simultaneously
1.2	Mode of reception	F1B
1.3	Sensitivity	2 µV e.m.f. (50 ohms), 4% error rate or less
1.4	Input protection	Withstands 30 Vrms for 15 minutes or more (w/ pre-amp unit)
1.5	Spurious emission	1nW or less
1.6	Message category	A: navigational warning B: meteorological warning C: ice report D: search and rescue information/piracy and armed robbery E: meteorological forecast F: pilot message G: AIS H: LORAN-C message I: reserved presently not used J: SATNAV message K: other electronic navigational aid system message L: navigational warning (additional) M to Y: reserved presently not used Z: QRU (no message on hand)

2 DISPLAY UNIT

2.1	Display system	5-inch, 76 (W) x 100 (H) mm, monochrome LCD, 240 x 320 dots
2.2	Display modes	Message selection mode Message display mode
2.3	Message storage	200 messages x 2 channels (100,000 characters x 2 channels)

3 PRINTER SECTION (FOR NX-700A ONLY)

3.1	Printing system	Line thermal head printing system
3.2	Printing paper	Thermal paper (58 mm x 30 m)
3.3	Printing width	48 mm
3.4	Character format	24 x 12 dot
3.5	Dot pitch	8 dots/ mm
3.6	Number of characters	32 characters/line
3.7	Print speed	Approx. 20 mm/sec.

4 ANTENNA UNIT

- | | | |
|-----|------------------|---------------------------------|
| 4.1 | Antenna type | NX-7H: H-field antenna |
| 4.2 | Output impedance | 50 ohms |
| 4.3 | Power supply | +7 V to +9 V (thru coax. cable) |

5 INTERFACE

- | | | |
|-----|-------------|--|
| 5.1 | Input data | IEC61162-1/2
ACK, ACN, CRQ, GGA, GLL, GNS, HBT, NRM, RMC, VBW, VHW,
VTG, ZDA, PFEC |
| 5.2 | Output data | ALC, ALF, ALR, ARC, HBT, NRM, NRX |
| 5.3 | Alarm | Normal close, contact closure signal (floating, max. 80 mA, 50 V)
for SAR alert |

6 POWER SUPPLY

- | | | |
|-----|---------|----------------------|
| 6.1 | NX-700A | 12-24 VDC: 1.5-0.8 A |
| 6.2 | NX-700B | 12-24 VDC: 0.7-0.4 A |

7 ENVIRONMENTAL CONDITION

- | | | |
|-----|-------------------------|---|
| 7.1 | Ambient temperature | |
| | Antenna unit | -25°C to +70°C |
| | Receiver / Display unit | -15°C to +55°C |
| 7.2 | Relative humidity | 95% at 40°C (without dew condensation) |
| 7.3 | Waterproofing | |
| | Antenna unit | IP66 |
| | Receiver / Display unit | IP20 (NX-700B: IP25 for front panel) |
| 7.4 | Vibration | - 2Hz to 5 Hz and up to 13.2 Hz with an excursion of ± 1 mm $\pm 10\%$
(7 m/s ² maximum acceleration at 13.2 Hz);
- above 13.2 Hz and up to 100 Hz with a constant maximum
acceleration of 7 m/s ² |

8 COATING COLOR

- | | | |
|-----|---------------|------|
| 8.1 | Display unit | N3.0 |
| 8.2 | Receiver unit | N3.0 |
| 8.3 | Antenna unit | N9.5 |

A) マストへの取付け MAST MOUNTING

a) マスト取付金具CP20-0111(工事材料)でマストに固定する。
USE MAST MOUNTING KIT CP20-0111.

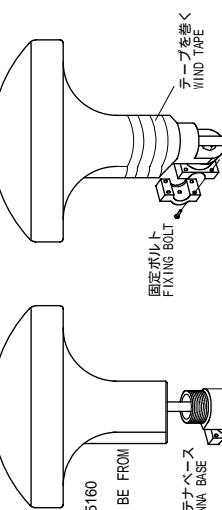

寸法区分(mm) DIMENSIONS		公差(mm) TOLERANCE
0 < L	50	± 1 . 5
50 < L	100	± 2 . 5
100 < L	500	± 3

寸法区分(mm) DIMENSIONS		質量(kg) MASS ± 10%
TYPE NX-3H-D(NX-300)	0.94	
TYPE NX-7H(NX-700)	0.6	

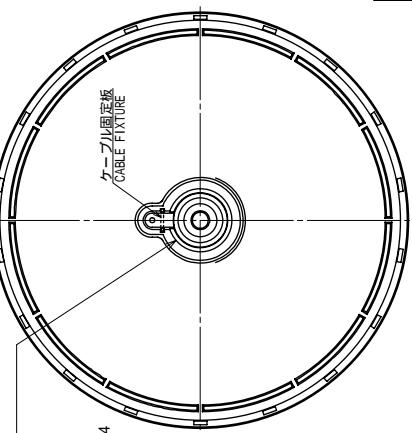

B) スタンションやパリピットにつけるとき HANDRAIL MOUNTING

レール用アンテナベース No. 13-RC5160 (取付け可能レール直径： 19 ~ 32)
(コード番号 : 000-806-114)

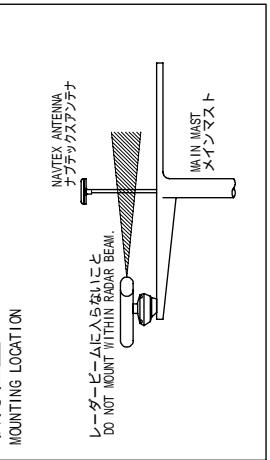

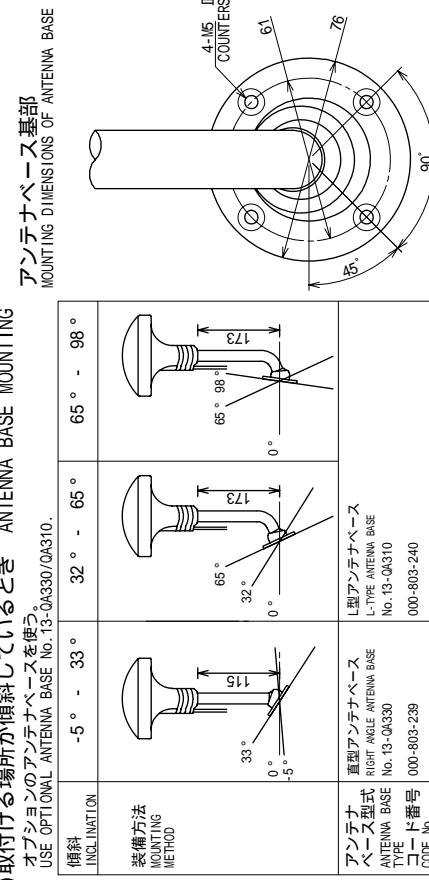

1-14JINSB
ねじ山数(25.4mmにつき) : 14
ビッチ : 1.8143 mm
オネジ有效長さ : 15.17 mm
オネジ頭直径 : 24.17 mm
THREAD PER 25.4mm (1 INCH) : 14
PITCH: 1.8143 mm
THREAD LENGTH: 15.17 mm
PITCH DIAMETER: 24.17 mm

C) 取付ける場所が傾斜しているとき ANTENNA BASE MOUNTING

オプションのアンテナベースを使用。
USE OPTIONAL ANTENNA BASE No.13-QA30/0A310.

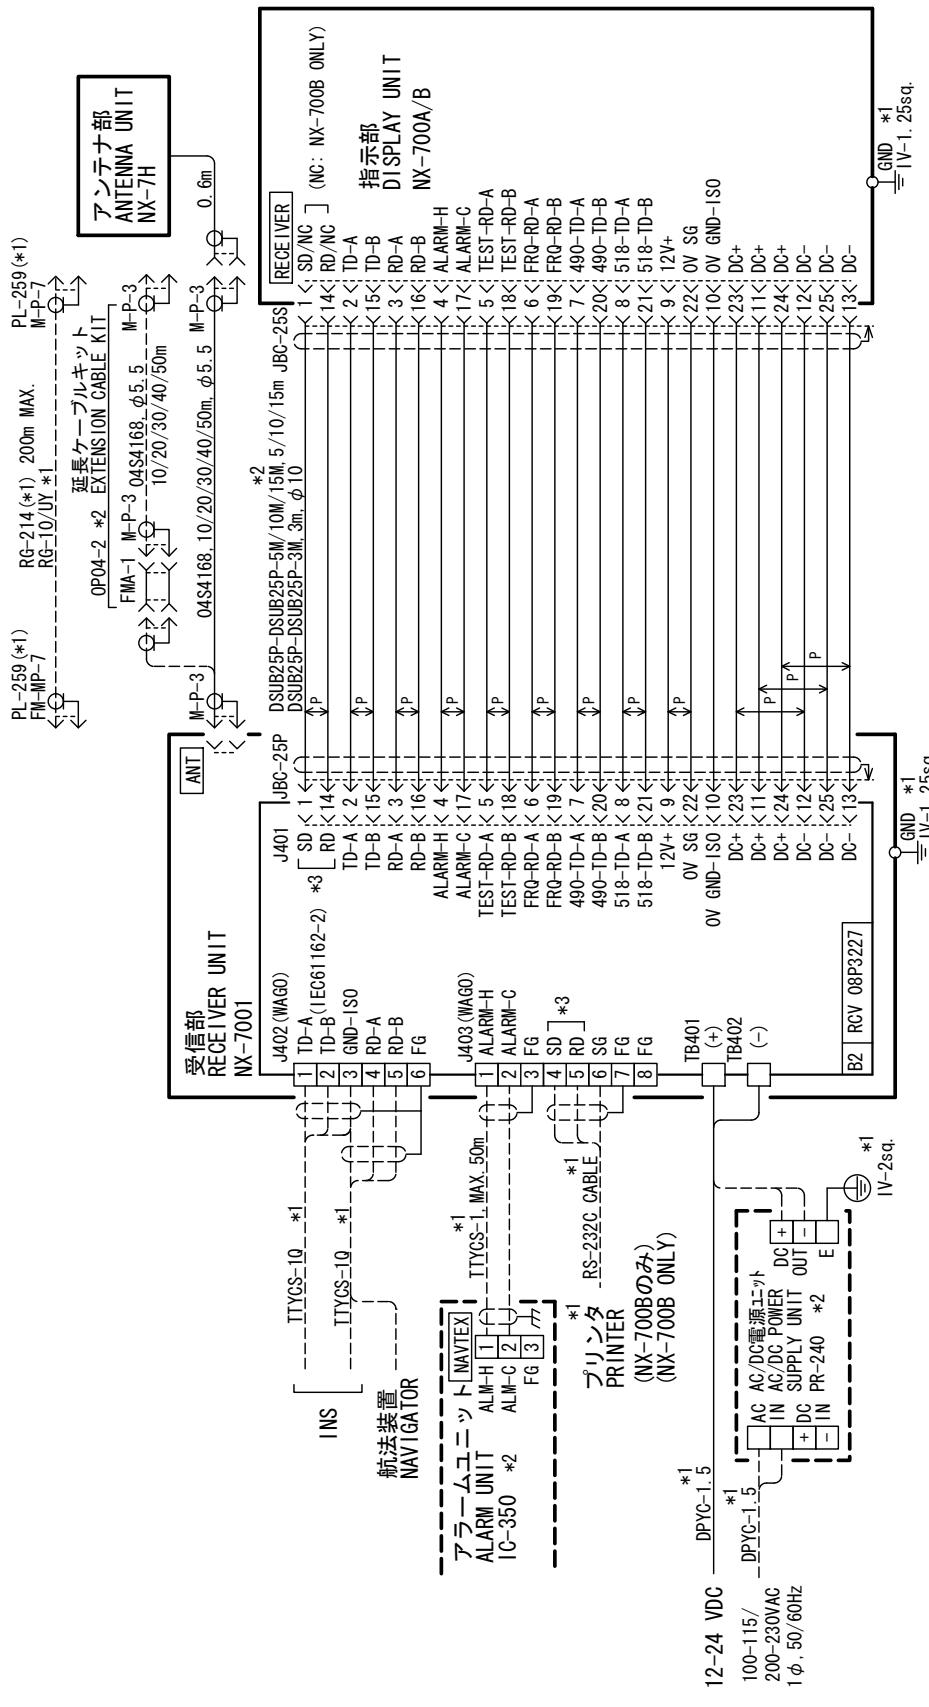

注記 1) バイブ(アンテナベース)はアンテナユニットにねじ込んだ後に固定する。
2) アンテナを固定するときはバイブ(アンテナベース)をアンテナベースにねじ込むこと。
NOTE 1. FASTEN PIPE(ANTENNA BASE) TO ANTENNA UNIT FIRST THEN FIX THEM TO MAST OR HANDRAIL.
2. WHEN FIXING ANTENNA, TURN PIPE OR ANTENNA BASE; NOT THE ANTENNA.
TURNING THE ANTENNA MAY TWIST THE CABLE AND PLACE STRESS ON CONNECTOR.
